General description	
High capacity battery for the IR camera.	
Power system	
Battery type	Rechargeable Li ion battery
Battery voltage	7.2 V
Battery capacity	4.4 Ah at +20°C (+68°F)
Battery note	Approximate lithium content: 3.0 g
Charging system	In camera (AC adapter or 12 V from a vehicle) or 2-bay charger
Charging time	2.5 h to 95% capacity, charging status indicated by LED's
Charging temperature	0°C to +45°C (+32°F to +113°F)
Environmental data	
Battery storage temperature range	-40°C to +70°C (-40°F to +158°F)
Physical data	
Battery weight	0.24 kg (0.52 lb.)
Size (L x W x H)	141 x 47 x 28 mm (5.5 x 1.8 x 1.1 in.)
Shipping information	
Packaging, type	Cardboard box
Packaging, weight	0.324 kg (0.7 lb.)
Packaging, size	183 x 136 x 63 mm (7.2 x 5.4 x 2.5 in.)
EAN-13	7332558004364
UPC-12	845188004347
Country of origin	Sweden

## General description

FLIR Reporter Professional is a powerful software for creating compelling and professional, fully customized, easy-to-interpret maintenance reports.

Professional Report Wizard guides you step-by-step in combining all IR inspection data - infrared and visual images, temperature measurements, and text notes – into a professional, easy-to-interpret maintenance report.

## Key features:

- Flexible report page design and layout for customized reports
- Use quick insert function to easily create custom report pages
- Fully integrated with standard Microsoft Word
- Generates reports in standard MS Office format and PDF-format
- Powerful temperature analysis
- Triple Fusion Picture-in-Picture (movable, sizable, scalable)
- Rapid report manager supporting automatic report generation by drag-and-drop
- Support for MSX (Multi-Spectral Dynamic Imaging) images
- Support for sketch images in both IR and visual with on/off toggling
- Support for same FOV ("Field of View Match")
- Grid settings
- Trending functionality
- Automatic link to Google™ Maps for images with GPS coordinates
- Automatic summary table for the report
- Fine tune images and make full temperature analysis directly in Microsoft Word
- Spell check
- Create your own formulas including measurement values from images
- Play radiometric sequences directly in the report
- Search functionality to quickly finding images for your report
- Panorama tool for combining several images to a larger image
- Support for GF series IR images
- Auto Update function
- Office 2003 (32-bit), Office 2007 (32-bit) and Office 2010 (32-bit)
- Windows 7 (32 and 64-bit), Windows Vista (32 and 64-bit)
- Support for METERLiNK™ data
- \*.docx compatibility

### General description

FLIR Tools is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

#### Key features:

- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Manual IR/Visual Image Grouping
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

### General description

FLIR Tools Mobile is an intuitive Android app for analyzing, managing, and distributing infrared images.

#### Key features:

- Remote control
- MSX
- Images with sketch on DC and IR
- Images with field of view follow
- Editable text comments
- Emissivity table
- Import images from your Wi-Fi-enabled camera.
- Connect and stream infrared images from the camera.
- Connect and stream measurement data from FLIR Test & Measurement meters
- Lay out and move measurement tools on the image.
- Read out temperature measurements.
- Create and configure temporal plots based on results of measurement tools on the infrared image.
- Log measurement data and export it as a \*.csv file.
- Save a measurement scenario as a data snapshot.
- Zoom in on images.
- On the Android device, remotely take snapshots when a camera is connected.
- On the camera, take snapshots that will automatically be saved on the Android device.
- Delete images on the Android device.
- Display an image's GPS coordinates on Google Maps.
- Create and e-mail reports.
- Save images in the Android device photo library.
- Send images to FTP sites and other file-sharing services (Dropbox, Box.net, etc.).
- Display image information, e.g., object parameters, text comments, and file details.
- Play back voice comments.
- Change the level and span.
- Change general settings in the app.
- Change the palette.

### Download

The application can be downloaded from Android Market or Amazon Marketplace, see the link below.

### General description

FLIR Tools Mobile lets professional thermographers use an iPad, iPhone, or iPod touch to see and capture live, streaming infrared video and stills from select FLIR cameras.

With FLIR Tools Mobile the camera can be stationed in one area and operated wirelessly from another – highly useful for IR inspections of energized equipment or performing IR surveys in hard-to-reach locations and harsh working environments. Streaming video and remote access also gives decision makers and others on your team a valuable opportunity to observe and collaborate in the thermal imaging process.

Using FLIR Tools Mobile, you can do one or more of the following:

- Import images from your infrared camera
- Lay out and move measurement tools on the image
- Read out temperature measurements
- Zoom in on images
- On the iPhone/iPad, remotely take snapshots when a camera is connected
- On the camera, take snapshots that will automatically be saved in the iPhone/iPad
- Delete any images on the iPhone/iPad
- Display an image's GPS coordinates on Google Maps
- Create and e-mail imagesheets
- Create and e-mail reports
- Print imagesheets and reports to any AirPrint-enabled printer
- Save images to iPhone/iPad photo library
- Send images to FTP sites and other file sharing services (Dropbox, Box.net, etc.)
- Display image information, such as object parameters, text comments, file information, etc.
- Play-back voice comments
- Change level and span
- Change general settings in the app
- Change palette

### General description

FLIR Tools is a software specifically designed to provide an easy way to analyze infrared images and create inspection reports.

Using FLIR Tools, you can do one or more of the following:

- Import images from your camera to your computer.
- Search for images.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Create new report templates.

FLIR Tools lets you take control of the following features on selected cameras:

- Connect an infrared camera to FLIR Tools and display its live image stream.
- When the camera is connected, lay out measurement tools, change parameters, create plots, etc.

### Download

The application can be downloaded from Mac App Store, see the link below.

<https://itunes.apple.com/app/flir-tools/id579348845?mt=12>

### Release notes

Version	2.1
New features	<p>Main improvements in version 2.1:</p> <ul style="list-style-type: none"> <li>• Support for thermal blending.</li> <li>• Support for groups and multispectral images.</li> <li>• Improved stability.</li> </ul> <p>Main improvements in version 2.0:</p> <ul style="list-style-type: none"> <li>• Connect an infrared camera to FLIR Tools and display its live image stream.</li> <li>• When the camera is connected, lay out measurement tools, change parameters, create plots, etc.</li> <li>• Create new report templates.</li> <li>• Various bug fixes.</li> </ul>

### System requirements

Operating system	• OS X 10.7 or later,
Hardware requirements	• MacOS

### Compatible with the following products

**General description**

The Extended Warranty Package covers parts and labour for your IR camera, consumables not included.

FLIR Systems warrants its products to be free from defects caused by faulty material or poor workmanship, for a period specified above. NO PRODUCT IS WARRANTED TO BE MERCHANTABLE OR FIT FOR ANY PARTICULAR USE OR APPLICATION. The warranty is void if the buyer damages the item due to misuse, abuse, modification, processing, or integration with other items. FLIR Systems' maximum liability under this warranty is limited to the obligation to replace or, at its sole option, to credit Buyer's account up to the purchase price.

### General description

General Maintenance package offers a complete 14 points inspection and calibration service (for one lens combination). Shipping cost not included.

#### 14-point inspection program:

- Perform a complete operational check.
- Fusion calibration and laser alignment, when applicable.
- Verify all internal cable and PCB connections.
- Clean the viewfinder and check the optics.
- Upgrade the internal camera software to the latest revisions.
- Perform minor repairs.
- Verify and/or re-equalize as needed each temperature range for image uniformity.
- Verify standard lens calibration (optional: other or specially engineered lenses).
- Verify ambient temperature compensation as needed.
- Recalibration to ensure factory specifications are met.
- Calibrate temperature ranges up to +1500°C, when applicable.
- Perform a quality-approved acceptance test procedure.
- Provide a calibration label with the next due date.
- Provide a calibration certificate (optional: extended calibration certificate with measured values).

### General description

This course bridges the gap between IR thermography, background science and application theory. The participant will learn the physical concepts of heat transfer and apply them together with relevant building science. After the course, the participant will be able to do a qualified building inspection on the base of existing laws, standards, and regulations.

Note: This course refers mainly to European building standards. Please consult ITC before selling it in other countries.

### Content

- Introduction and refresher of IR basics
- Thermal transfer and wall structures
- Insulating materials
- Humidity, moisture, and the dew point
- Air leaks, pressure profiles, and air permeability
- Survey methodology

### Labs

- Outside inspection
- Air permeability test (with Blower Door)
- Reporting

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Professional users in building applications who want to become experts in Building Thermography.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Has a background in a building profession, but rather moderate experience in IR or has experience in another IR application field but rather moderate knowledge in building science</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Knowledge of building techniques</li> <li>• Bring own PC for calculations and exercises</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	Theory takes place in the mornings, practical labs, calculations, and software exercises are scheduled for the afternoons.
Exam	A final test (20 multiple choice questions) will be written on the 3rd day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"><li>• Tuition by ITC licensed instructor</li><li>• Training material in printed format</li><li>• Refreshments</li><li>• Diploma of attendance</li><li>• Attendance of 1 person</li><li>• Might include more, such as lunch, depending on location and organizing entity</li></ul>
Course organization	
ITC	The Advanced Building Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach the Advanced Building Course.

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.	
This partnumber is reserved for adding additional students to an on site class.	
Content	
<ul style="list-style-type: none"> <li>An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Course details	
Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.	
Content	
<ul style="list-style-type: none"> <li>An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Course details	
Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.
Exam	Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>Practical user</li> <li>This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having already some basic experience with IR thermography,</li> <li>knowing the basic functions of the camera,</li> <li>who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Be familiar with the basic operation of an infrared camera</li> <li>Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for the inspection of buildings. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography and how to use your camera the best way. The second day you will start with a brief reminder of thermal transfers before you learn about the building envelope, important physical parameters and typical faults. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Basics of heat transfer
- The building envelope
- Important physical parameters
- Major anomalies
- Thermal patterns
- Application guidelines
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Building application labs

### Course information

Available languages	English, French, German, Swedish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and building applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person from the building sector</li> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• Students and pupils with thermography and building application related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of heating and HVAC systems, and related installations. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography, and how to use your camera the best way. The second day you will get introduced to various heating systems before you learn about typical faults and how thermography helps you to locate and analyze these. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Heating systems
- Pipe tracing and localization of water circuits
- Water leaks
- Moisture and humidity
- Water radiators
- Tanks, manifolds and plenums
- HVAC systems
- Industrial heat exchangers
- Photovoltaic panel inspection
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Application labs

### Course information

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Heating systems
- Pipe tracing and localization of water circuits
- Water leaks
- Moisture and humidity
- Water radiators
- Tanks, manifolds and plenums
- HVAC systems
- Industrial heat exchangers
- Photovoltaic panel inspection
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Application labs

### Course information

Available languages	English, French, German, Italian, Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Beginners and anybody interested in IR thermography, plumbing and HVAC applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Plumbers or persons working with plumbing and or/HVAC systems</li> <li>• Facility managers</li> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos and practical labs alternate.
Exam	None

**P/N: ITC-EXP-2069**

Course details	
Course fee includes	<ul style="list-style-type: none"><li>• Tuition by qualified ITC instructor</li><li>• Training material in printed format</li><li>• Diploma of attendance</li><li>• Attendance of a group up to 10 persons</li><li>• Might include more, such as refreshments or lunch, depending on location.</li></ul>
Note	Course fee does not include cost for instructor's travelling or lodging.

Course organization	
ITC	The "ITC Short Course HVAC and plumbing" is offered in EMEA by ITC and partners. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The "ITC Short Course HVAC and plumbing" is lectured by qualified ITC instructors with special experience in the field of electrical installations.

**Compatible with the following products**

#### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

#### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

#### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.

#### Content

- System requirements
- Configuration
- Analyzing functions
- Templates
- Reporting functions
- Data exchange

#### Labs

- System set up
- Data import
- Data analysis
- Creating templates
- Creating reports
- Exporting data
- Triggering

### Course information

Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Consultants interested in reporting</li> <li>• Building inspectors with reporting needs</li> <li>• R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> </ul>

### Course details

Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

General description	
This device is a viewport which consist of a crystal "glass" window, mounted in an aluminum frame. The glass is specially formulated to allow transmission of infrared light to allow use of infrared thermal sensing equipment without opening the enclosure. This device is intended for installation in doors or walls of electrical enclosures without compromising the integrity of the enclosure.	
Power system	
Voltage	Any range
Environmental data	
Environment	Indoor/outdoor type 4/12
Operating temperature range	Maximum: 260°C (500°F)
Storage temperature range	Optics, maximum: 1357°C (2474°F)
Physical data	
Size (L x W x H)	25.5 x 73 x 86 mm (1.0 x 2.87 x 3.36 in.)
Viewing aperture diameter	45 mm (1.77 in.)
Material	Optics: CaF2 (Calcium Fluoride Crystal) Body: Anodized aluminum Hardware: steel
Comments to physical data	Required hole diameter, nominal: 60.3 mm (2.375 in.) Greenlee Punch: 76BB Maximum pullout strength: 658 kg (1450 lb.)
Lens	
Waveband	Broadband IR: short-, mid-, and longwave
Visible light spectrum	Yes
Certifications	
Certification	UL, IP67, NEMA Type 4/12, CSA
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>IR window</li> <li>Case</li> <li>Mounting instruction</li> <li>Additional safety screw</li> </ul>
Packaging, weight	0.24 kg (0.53 lb.)
Packaging, size	120 x 115 x 40 mm (4.7 x 4.5 x 1.6 in.)

General description	
High capacity battery for the IR camera.	
Power system	
Battery type	Rechargeable Li ion battery
Battery voltage	7.2 V
Battery capacity	4.4 Ah at +20°C (+68°F)
Battery note	Approximate lithium content: 3.0 g
Charging system	In camera (AC adapter or 12 V from a vehicle) or 2-bay charger
Charging time	2.5 h to 95% capacity, charging status indicated by LED's
Charging temperature	0°C to +45°C (+32°F to +113°F)
Environmental data	
Battery storage temperature range	-40°C to +70°C (-40°F to +158°F)
Physical data	
Battery weight	0.24 kg (0.52 lb.)
Size (L x W x H)	141 x 47 x 28 mm (5.5 x 1.8 x 1.1 in.)
Shipping information	
Packaging, type	Cardboard box
Packaging, weight	0.324 kg (0.7 lb.)
Packaging, size	183 x 136 x 63 mm (7.2 x 5.4 x 2.5 in.)
EAN-13	7332558004364
UPC-12	845188004347
Country of origin	Sweden

### Compatible with the following products

- 44401-0201; FLIR GF300 14.5°

## General description

FLIR Reporter Professional is a powerful software for creating compelling and professional, fully customized, easy-to-interpret maintenance reports.

Professional Report Wizard guides you step-by-step in combining all IR inspection data - infrared and visual images, temperature measurements, and text notes – into a professional, easy-to-interpret maintenance report.

## Key features:

- Flexible report page design and layout for customized reports
- Use quick insert function to easily create custom report pages
- Fully integrated with standard Microsoft Word
- Generates reports in standard MS Office format and PDF-format
- Powerful temperature analysis
- Triple Fusion Picture-in-Picture (movable, sizable, scalable)
- Rapid report manager supporting automatic report generation by drag-and-drop
- Support for MSX (Multi-Spectral Dynamic Imaging) images
- Support for sketch images in both IR and visual with on/off toggling
- Support for same FOV ("Field of View Match")
- Grid settings
- Trending functionality
- Automatic link to Google™ Maps for images with GPS coordinates
- Automatic summary table for the report
- Fine tune images and make full temperature analysis directly in Microsoft Word
- Spell check
- Create your own formulas including measurement values from images
- Play radiometric sequences directly in the report
- Search functionality to quickly finding images for your report
- Panorama tool for combining several images to a larger image
- Support for GF series IR images
- Auto Update function
- Office 2003 (32-bit), Office 2007 (32-bit) and Office 2010 (32-bit)
- Windows 7 (32 and 64-bit), Windows Vista (32 and 64-bit)
- Support for METERLiNK™ data
- \*.docx compatibility

### General description

FLIR Tools is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

#### Key features:

- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Manual IR/Visual Image Grouping
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

## General description

Compared to FLIR Tools, FLIR Tools+ has the following features:

- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting

FLIR Tools/Tools+ is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

FLIR Tools+ main features:

- Manual IR/Visual Image Grouping
- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting - Microsoft Office 2007 (32bit), and 2010 (32bit) support
- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

### General description

FLIR Tools Mobile is an intuitive Android app for analyzing, managing, and distributing infrared images.

#### Key features:

- Remote control
- MSX
- Images with sketch on DC and IR
- Images with field of view follow
- Editable text comments
- Emissivity table
- Import images from your Wi-Fi-enabled camera.
- Connect and stream infrared images from the camera.
- Connect and stream measurement data from FLIR Test & Measurement meters
- Lay out and move measurement tools on the image.
- Read out temperature measurements.
- Create and configure temporal plots based on results of measurement tools on the infrared image.
- Log measurement data and export it as a \*.csv file.
- Save a measurement scenario as a data snapshot.
- Zoom in on images.
- On the Android device, remotely take snapshots when a camera is connected.
- On the camera, take snapshots that will automatically be saved on the Android device.
- Delete images on the Android device.
- Display an image's GPS coordinates on Google Maps.
- Create and e-mail reports.
- Save images in the Android device photo library.
- Send images to FTP sites and other file-sharing services (Dropbox, Box.net, etc.).
- Display image information, e.g., object parameters, text comments, and file details.
- Play back voice comments.
- Change the level and span.
- Change general settings in the app.
- Change the palette.

### Download

The application can be downloaded from Android Market or Amazon Marketplace, see the link below.

### General description

FLIR Tools Mobile lets professional thermographers use an iPad, iPhone, or iPod touch to see and capture live, streaming infrared video and stills from select FLIR cameras.

With FLIR Tools Mobile the camera can be stationed in one area and operated wirelessly from another – highly useful for IR inspections of energized equipment or performing IR surveys in hard-to-reach locations and harsh working environments. Streaming video and remote access also gives decision makers and others on your team a valuable opportunity to observe and collaborate in the thermal imaging process.

Using FLIR Tools Mobile, you can do one or more of the following:

- Import images from your infrared camera
- Lay out and move measurement tools on the image
- Read out temperature measurements
- Zoom in on images
- On the iPhone/iPad, remotely take snapshots when a camera is connected
- On the camera, take snapshots that will automatically be saved in the iPhone/iPad
- Delete any images on the iPhone/iPad
- Display an image's GPS coordinates on Google Maps
- Create and e-mail imagesheets
- Create and e-mail reports
- Print imagesheets and reports to any AirPrint-enabled printer
- Save images to iPhone/iPad photo library
- Send images to FTP sites and other file sharing services (Dropbox, Box.net, etc.)
- Display image information, such as object parameters, text comments, file information, etc.
- Play-back voice comments
- Change level and span
- Change general settings in the app
- Change palette

General description	
FLIR Tools is a software specifically designed to provide an easy way to analyze infrared images and create inspection reports.	
Using FLIR Tools, you can do one or more of the following:	
<ul style="list-style-type: none"> <li>• Import images from your camera to your computer.</li> <li>• Search for images.</li> <li>• Lay out, move, and resize measurement tools on any infrared image.</li> <li>• Create PDF reports for images of your choice.</li> <li>• Add headers, footers, and logos to reports.</li> <li>• Create new report templates.</li> </ul>	
FLIR Tools lets you take control of the following features on selected cameras:	
<ul style="list-style-type: none"> <li>• Connect an infrared camera to FLIR Tools and display its live image stream.</li> <li>• When the camera is connected, lay out measurement tools, change parameters, create plots, etc.</li> </ul>	
Download	
The application can be downloaded from Mac App Store, see the link below.	
<a href="https://itunes.apple.com/app/flir-tools/id579348845?mt=12">https://itunes.apple.com/app/flir-tools/id579348845?mt=12</a>	
Release notes	
Version	2.1
New features	<p>Main improvements in version 2.1:</p> <ul style="list-style-type: none"> <li>• Support for thermal blending.</li> <li>• Support for groups and multispectral images.</li> <li>• Improved stability.</li> </ul> <p>Main improvements in version 2.0:</p> <ul style="list-style-type: none"> <li>• Connect an infrared camera to FLIR Tools and display its live image stream.</li> <li>• When the camera is connected, lay out measurement tools, change parameters, create plots, etc.</li> <li>• Create new report templates.</li> <li>• Various bug fixes.</li> </ul>
System requirements	
Operating system	<ul style="list-style-type: none"> <li>• OS X 10.7 or later,</li> </ul>
Hardware requirements	<ul style="list-style-type: none"> <li>• MacOS</li> </ul>

### Compatible with the following products

- 55903-0922; FLIR T600 15° (incl. Wi-Fi)
- 55903-1022; FLIR T600 25° (incl. Wi-Fi)

General description	
ThermoVision™ System Developers Kit	
Key features:	
<ul style="list-style-type: none"> <li>• Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces.</li> <li>• Gives the user full control of the camera.</li> <li>• Allows the user to set alarm conditions and measurement functions in the camera</li> <li>• Allows the user to define I/O functionality (FLIR A series).</li> <li>• Based on ActiveX technology.</li> <li>• Supports acquisition of images through FireWire™, Ethernet, and USB interfaces.</li> <li>• Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf).</li> <li>• Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities.</li> <li>• Allows 16-bit temperature linear outputs from FLIR A series cameras.</li> <li>• Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc.</li> <li>• Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.</li> </ul>	
Users with licenses for the previous version can download a free upgrade via the following link: <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=62">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=62</a>

General description	
<p>The ThermoVision LabVIEW Toolkit is a set of VIs (virtual instruments) for cameras that support alarms, measurement functions, and I/O functionality.</p> <p>Through LabVIEW, you can use these VIs as sub-VIs to manage communications with a FLIR IR camera in digital mode.</p> <p>You can also generate true temperature images from images acquired through LabVIEW, and can use the LabVIEW IR Measurement and Display tools to analyze the temperatures of imaged objects.</p>	
Key features:	
<ul style="list-style-type: none"> <li>Set up communications between LabVIEW VI and a FLIR IR camera</li> <li>Capture and collect images via FireWire or Ethernet interfaces</li> <li>Adjust the camera configuration parameters and focus as you view a live image</li> <li>Control the camera calibration</li> <li>Send any other camera command to the camera</li> <li>Generate a true temperature image from a 16-bit image acquired using the camera's FireWire or Ethernet interfaces</li> <li>Close communications to the IR camera</li> </ul>	
<p>Users with licenses for the previous version can download a free upgrade via the following link:  <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63</a></p>	
Note: Only supports National Instrument 32-bit Labview	
Release notes	
Version	3.3
New features	<ul style="list-style-type: none"> <li>Windows 7 32- and 64-bit support</li> <li>Support for FLIR A615 and FLIR SC6X5 (including windowing)</li> <li>Support for windowing in FLIR SC660</li> <li>Various bug fixes</li> <li>New example VIs</li> </ul>

### General description

The Extended Warranty Package covers parts and labour for your IR camera, consumables not included.

FLIR Systems warrants its products to be free from defects caused by faulty material or poor workmanship, for a period specified above. NO PRODUCT IS WARRANTED TO BE MERCHANTABLE OR FIT FOR ANY PARTICULAR USE OR APPLICATION. The warranty is void if the buyer damages the item due to misuse, abuse, modification, processing, or integration with other items. FLIR Systems' maximum liability under this warranty is limited to the obligation to replace or, at its sole option, to credit Buyer's account up to the purchase price.

**General description**

General Maintenance package offers a complete 14 points inspection and calibration service (for one lens combination). Shipping cost not included.

**14-point inspection program:**

- Perform a complete operational check.
- Fusion calibration and laser alignment, when applicable.
- Verify all internal cable and PCB connections.
- Clean the viewfinder and check the optics.
- Upgrade the internal camera software to the latest revisions.
- Perform minor repairs.
- Verify and/or re-equalize as needed each temperature range for image uniformity.
- Verify standard lens calibration (optional: other or specially engineered lenses).
- Verify ambient temperature compensation as needed.
- Recalibration to ensure factory specifications are met.
- Calibrate temperature ranges up to +1500°C, when applicable.
- Perform a quality-approved acceptance test procedure.
- Provide a calibration label with the next due date.
- Provide a calibration certificate (optional: extended calibration certificate with measured values).

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. Additional days can be booked (ITC-ADV-3006). After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

**P/N: ITC-ADV-3041**

Course information	
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-ADV-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Might include more, such as lunch or refreshments, depending on location and the organizing entity</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. For open classes, please contact your closest ITC, ITC partner or FLIR sales representative.
Course organization	
ITC	The course "ITC Advanced Thermal Measurements (R&D)" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC Advanced Thermal Measurements (R&D)" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

**Compatible with the following products**

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

- Customized

### Course information

Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Advanced users who wish to receive an in-depth guidance to complex problems related to infrared equipment, applications, and measurement questions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Industry technical personnel</li> <li>• Researchers</li> <li>• Scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics

**P/N: ITC-EXP-1050**

© 2015, FLIR Systems, Inc.

#ITC-EXP-1050; r. 23306; en-US

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Consultancy by qualified ITC specialist</li> <li>Training and/or reference material</li> </ul>
Note	Consultancy is typically carried out at the customer's site. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	ITC consultancy is offered by ITC in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	ITC consultancy is delivered by ITC qualified specialists having the relevant expertise in infrared measurement and the related fields of application.

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

Course information	
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Standard: 2 days Upon request: Additional day including complementary topics Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 4 persons</li> <li>Might include more, such as lunch, refreshments, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC In-house R&D training ATS products" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC In-house R&D training ATS products" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

#### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

#### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

#### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of photovoltaic solar systems.

During the first day, you learn about the basics of thermography, how a thermal camera works, and how to use it correctly. The second day starts with the basics of photovoltaic solar systems and solar panel installations. You learn about IR metrological particularities that are critical for solar panel inspections with a thermal camera, how to interpret the displayed thermal images, and in which way they can be associated to typical problems and faults. Emphasis is put on case studies, selected from the field, as well as practical exercises.

### Content

- Basics of thermography (radiation, spectral waveband, influences of the atmosphere)
- IR camera: principle, design and operation (FPA, measurement ranges, thermal tuning: level and span, color palettes)
- IR measurement technique: measurement parameters (emissivity, radiation from the environment, distance, relative humidity, atmospheric temperature)
- IR Camera figures of merit: resolution limits (thermal, spatial, time related)
- Practical exercises
- Basics of photovoltaic solar systems (terminology, design, principle of operation, module types)
- Solar panel installation: connection types (string, bypass diodes, shadowing)
- IR metrological particularity (spectral bands, inspection conditions, spatial resolution, camera positioning and angle)
- Typical thermal readouts (examples, causes and interpretation – defect/no defect, practical exercises)

### Course information

Available languages	English, French, German, Swedish, Italian, Dutch, Spanish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in the use of IR thermography for the inspection of photovoltaic solar systems.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person working with maintenance or installation of solar panels.</li> <li>• Thermographers familiar with electrical inspections and interested in solar panel inspections.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge in electrical installations or another technical field.</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos and practical labs alternate.

General description	
This 2-day course consists of lectures on theoretical subjects, plus hands-on.	
After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.	
Content	
<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Review on thermal transfer</li> <li>• Radiative heat transfer (includes estimation of T<sub>Refl</sub> and the emissivity) (with practice)</li> <li>• Thermography equipment</li> <li>• Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>• Measurements and software exercises</li> </ul>	
Course information	
Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Standard: 2 days (in succession or separate)  Upon request: Additional day including complementary topics (ITC-EXP-3006)  Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

**P/N: ITC-EXP-2036**

© 2015, FLIR Systems, Inc.

#ITC-EXP-2036; r. 23306; en-US

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of electrical systems. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography and how to use your camera the best way. The second day you will start with a brief reminder of thermal transfers before you learn about electrical systems and components, material properties, typical problems and faults. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Basics of heat transfer
- Electrical systems
- Important properties of material
- Most common problems
- Case studies
- Common mistakes
- Application guidelines
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Electrical application labs

### Course information

Available languages	English, French, German, Swedish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and electrical applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person working with maintenance or installation of electrical systems</li> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• Students and pupils with thermography and electrical application related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

General description	
These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.	
Content	
<ul style="list-style-type: none"> <li>• System requirements</li> <li>• Configuration</li> <li>• Analyzing functions</li> <li>• Templates</li> <li>• Reporting functions</li> <li>• Data exchange</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>• System set up</li> <li>• Data import</li> <li>• Data analysis</li> <li>• Creating templates</li> <li>• Creating reports</li> <li>• Exporting data</li> <li>• Triggering</li> </ul>	
Course information	
Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Consultants interested in reporting</li> <li>• Building inspectors with reporting needs</li> <li>• R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> </ul>
Course details	
Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

General description	
High capacity battery for the IR camera.	
Note: Replaces 1195106 - Battery	
Power system	
Battery type	Rechargeable Li ion battery
Battery voltage	7.2 VDC
Battery capacity	2.1 Ah
Battery note	Approximate lithium content: 1.5 g
Physical data	
Size (L x W x H)	89 x 42.2 x 19.8 mm (3.5 x 1.7 x 0.8 in.)
Shipping information	
List of contents	<ul style="list-style-type: none"><li>Battery</li><li>Instruction Battery charging</li></ul>

### General description

This course bridges the gap between IR thermography, background science and application theory. The participant will learn fundamental concepts of heat and chemistry, to setup and to operate the furnace camera, and to adjust it for environmental conditions related to furnace applications.

Lab and/or field practice is a key part of this class. Basic inspection procedures will be covered including equipment checkout, route planning, permitting requirements, safety practices/equipment and reporting concepts.

This partnumber is reserved for adding additional students to an advanced furnace application on site class.

### Content

- Introduction
- Working environment (refineries, units, furnaces)
- General rules, camera set up and operation
- On site job organization and related procedures
- Basics of radiative thermal transfer
- Principles and limitations of IR furnace applications
- Discussion and evaluation of inspection and measurement results
- Methodology
- Reporting

### Labs

- On site job organization
- Follow the site inspection procedure
- Site measurements
- If possible, field work on-site inspecting real equipment

### Course information

Available languages	English, French
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR furnace cameras such as the FLIR GF309.</li> <li>• Users of models like AGEMA 550, Inframetrics 290/390, FLIR ThermoCAM P25F/P50F</li> <li>• Qualified thermographers who want to learn more about furnace applications</li> <li>• Non thermographers who want to learn how to use GF cameras or other cameras suited for furnace applications for measurements in their industry</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person working with furnace applications in the industry and/or with surveillance and/or predictive maintenance and rather moderate knowledge on IR thermography or</li> <li>A person from another IR application field, with rather moderate knowledge about furnace applications and not too much experience of GF cameras.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Basic understanding and knowledge of natural sciences</li> <li>Technical background</li> </ul>
Course details	
Duration	3 days, additional days upon request (ITC-ADV-4006)
Structure	Theory classes with integrated hands-on during day one and the morning of day two and three, practical labs respective exam in the afternoon of day two and three.
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material in printed format</li> <li>Diploma of attendance</li> <li>Might include more, such as refreshments or lunch, depending on location and organizing entity</li> </ul>
Note	This course can only be booked via ITC due to the FLIR GF camera export restrictions.
Course organization	
ITC	The ITC Advanced Furnace Application Course is offered worldwide by ITC subsidiaries. Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	The ITC Advanced Furnace Application is lectured by qualified ITC trainers with special expertise in handling the GF cameras and furnace applications.

**Compatible with the following products**

- 44601-0101; FLIR GF309 14.5°
- 44602-0101; FLIR GF309 14.5° Fixed lens
- 44601-0102; FLIR GF309 24°
- 44602-0102; FLIR GF309 24° Fixed lens

General description	
The 7° lens is a popular lens accessory and provides 3.5× magnification compared to the standard lens. Ideal for small or distant targets such as overhead power lines. The lens fits P and S-series.	
Imaging and optical data	
Field of view (FOV)	6,83° × 5.12°/5.61° × 4.21°
Minimum focus distance	4.0 m (13.11 ft.)
Focal length	124 mm (4.9 in.)
Spatial resolution (IFOV)	0.37 mrad/0.31 mrad
F-number	1.0
Lens note	When two pieces of data are separated by “/” the first piece of data is for cameras with a serial number starting with 218 or 234 and the second piece of data is for cameras with a serial number starting with 253
Physical data	
Weight	1.6 kg (3.53 lb.) incl. mechanical support
Size (L × D)	215 mm (8.46 in.) × 160.5 mm (6.32 in.)
Shipping information

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

## General description

FLIR Reporter Professional is a powerful software for creating compelling and professional, fully customized, easy-to-interpret maintenance reports.

Professional Report Wizard guides you step-by-step in combining all IR inspection data - infrared and visual images, temperature measurements, and text notes – into a professional, easy-to-interpret maintenance report.

## Key features:

- Flexible report page design and layout for customized reports
- Use quick insert function to easily create custom report pages
- Fully integrated with standard Microsoft Word
- Generates reports in standard MS Office format and PDF-format
- Powerful temperature analysis
- Triple Fusion Picture-in-Picture (movable, sizable, scalable)
- Rapid report manager supporting automatic report generation by drag-and-drop
- Support for MSX (Multi-Spectral Dynamic Imaging) images
- Support for sketch images in both IR and visual with on/off toggling
- Support for same FOV ("Field of View Match")
- Grid settings
- Trending functionality
- Automatic link to Google™ Maps for images with GPS coordinates
- Automatic summary table for the report
- Fine tune images and make full temperature analysis directly in Microsoft Word
- Spell check
- Create your own formulas including measurement values from images
- Play radiometric sequences directly in the report
- Search functionality to quickly finding images for your report
- Panorama tool for combining several images to a larger image
- Support for GF series IR images
- Auto Update function
- Office 2003 (32-bit), Office 2007 (32-bit) and Office 2010 (32-bit)
- Windows 7 (32 and 64-bit), Windows Vista (32 and 64-bit)
- Support for METERLiNK™ data
- \*.docx compatibility

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

- Customized

### Course information

Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Advanced users who wish to receive an in-depth guidance to complex problems related to infrared equipment, applications, and measurement questions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Industry technical personnel</li> <li>• Researchers</li> <li>• Scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### General description

An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

This partnumber is reserved for adding additional students to an on site class.

### Content

- An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.

### Labs

- Portable classroom labs
- Field training on the site in agreement with the customer

### Course information

Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>

### Course details

Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

#### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

#### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

#### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.

#### Content

- System requirements
- Configuration
- Analyzing functions
- Templates
- Reporting functions
- Data exchange

#### Labs

- System set up
- Data import
- Data analysis
- Creating templates
- Creating reports
- Exporting data
- Triggering

### Course information

Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Consultants interested in reporting</li> <li>• Building inspectors with reporting needs</li> <li>• R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> </ul>

### Course details

Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

General description	
These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.	
Content	
<ul style="list-style-type: none"> <li>System requirements</li> <li>Configuration</li> <li>Analyzing functions</li> <li>Templates</li> <li>Reporting functions</li> <li>Data exchange</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>System set up</li> <li>Data import</li> <li>Data analysis</li> <li>Creating templates</li> <li>Creating reports</li> <li>Exporting data</li> <li>Triggering</li> </ul>	
Course information	
Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Consultants interested in reporting</li> <li>Building inspectors with reporting needs</li> <li>R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> </ul>
Course details	
Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

## General description

FLIR ResearchIR Max 4.0 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

### Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

General description	
FLIR ResearchIR Max + HSDR 4 contains all the features of FLIR ResearchIR Max 4, plus support for FLIR High Speed Data Recorder (HSDR) products.	
Main features:	
<ul style="list-style-type: none"> <li>• Pre/post-recording.</li> <li>• Mathematical processing toolbox.</li> <li>• Image filtering toolbox.</li> <li>• Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.</li> <li>• View, record and store images at high speed.</li> <li>• Post-processing of fast thermal events.</li> <li>• Generate time-temperature plots from live images or recorded sequences.</li> <li>• Advanced start/stop recording conditions.</li> <li>• Unlimited number of analysis functions (spot, line, area).</li> <li>• File organizer.</li> <li>• Zoom and pan allows a closer look.</li> <li>• Multiple dockable objects for plots and statistics.</li> <li>• Export images and results to bitmap, video, Excel, MATLAB or CSV formats</li> <li>• Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.</li> </ul>	
FLIR ResearchIR Max + HSDR 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.	
Download	
Download your copy of FLIR ResearchIR Max + HSDR 4 here (hardware security device required to run the software):	
<a href="http://support.flir.com/rir4">http://support.flir.com/rir4</a>	
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>• FLIR ResearchIR Max + HSDR 4 download card.</li> <li>• Hardware security device.</li> </ul>
Packaging, weight	0.068 kg (0.15 lb.)
Packaging, size	202 × 146 × 25 mm (8.0 × 5.7 × 1.0 in.)
EAN-13	7332558007280
UPC-12	845188007652
Country of origin	Sweden

## Compatible with the following products

- 55903-0922; FLIR T600 15° (incl. Wi-Fi)
- 55903-1022; FLIR T600 25° (incl. Wi-Fi)

General description	
FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.	
You can perform one or more of the following with FLIR IR Camera Player:	
<ul style="list-style-type: none"> <li>Record a video stream from the camera.</li> <li>Save a frame from the video stream as a snapshot image (*.bmp).</li> <li>Autofocus, focus far, and focus near.</li> <li>Autoadjust the camera image.</li> <li>Freeze the camera image.</li> <li>Save a camera image in the camera.</li> <li>Change Color palette.</li> <li>Add an image description and a text comment to an image.</li> </ul>	
You connect a camera in one of the following ways:	
<ul style="list-style-type: none"> <li>Ethernet</li> <li>FireWire</li> <li>USB</li> </ul>	
Download	
This software is a freeware. To download, click the following link:	
<a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=89">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=89</a>	
Release notes	
Version	2.3.3
New features	<p>Main improvements in version 2.3.3:</p> <ul style="list-style-type: none"> <li>Added latest device drivers (1.9.1.0).</li> <li>Various bugfixes</li> </ul> <p>Main improvements in version 2.2.7:</p> <ul style="list-style-type: none"> <li>Added support for FLIR Ax5 series.</li> </ul>
System requirements	
Operating system	<ul style="list-style-type: none"> <li>Windows XP, 32-bit</li> <li>Windows Vista, 32-bit/64-bit</li> <li>Windows 7, 32-bit/64-bit</li> </ul>

## General description

FLIR ResearchIR Max 4.0 is aimed at R&D and science professionals who use thermal imaging cameras with a cooled or uncooled detectors. FLIR ResearchIR Max makes the most of a thermal imaging camera, and allows high-speed recording and advanced thermal pattern analysis. FLIR ResearchIR Max is the perfect tool for industrial R&D.

### Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

## General description

FLIR ResearchIR Max + HSDR 4 contains all the features of FLIR ResearchIR Max 4, plus support for FLIR High Speed Data Recorder (HSDR) products.

### Main features:

- Pre/post-recording.
- Mathematical processing toolbox.
- Image filtering toolbox.
- Radiometric digital detail enhancement (DDE) improves dramatically the understanding of the thermal image, while maintaining radiometric measurement accuracy.
- View, record and store images at high speed.
- Post-processing of fast thermal events.
- Generate time-temperature plots from live images or recorded sequences.
- Advanced start/stop recording conditions.
- Unlimited number of analysis functions (spot, line, area).
- File organizer.
- Zoom and pan allows a closer look.
- Multiple dockable objects for plots and statistics.
- Export images and results to bitmap, video, Excel, MATLAB or CSV formats
- Local scale gain control on measurement - automatically adjusts the contrast in a specific part of the image.

FLIR ResearchIR Max + HSDR 4 in combination with a FLIR thermal imaging camera is the perfect solution for any R&D or scientific application. It will allow researchers in all fields to make the smallest of temperature differences visible and to thoroughly analyze the thermal process in real-time.

## Shipping information

Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>• FLIR ResearchIR Max + HSDR 4 download card.</li> <li>• Hardware security device.</li> </ul>
Packaging, weight	0.068 kg (0.15 lb.)
Packaging, size	202 × 146 × 25 mm (8.0 × 5.7 × 1.0 in.)
EAN-13	7332558007280
UPC-12	845188007652
Country of origin	Sweden

## Compatible with the following products

- 55903-0922; FLIR T600 15° (incl. Wi-Fi)
- 55903-1022; FLIR T600 25° (incl. Wi-Fi)

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

### General description

This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.

#### Content

- Customized

#### Labs

- Customized

### Course information

Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Researchers</li> <li>• Scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by qualified ITC instructor</li> <li>• Training material</li> <li>• Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

Course organization	
ITC	ITC customized workshops are offered worldwide by ITC and partners. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	ITC customized workshops are lectured by ITC qualified specialists having the relevant expertise in the workshop's subject and the related fields of application.

Products described herein may be subject to US Export Regulations. Please refer to [exportquestions@flir.com](mailto:exportquestions@flir.com) with any questions.

### General description

An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

This partnumber is reserved for adding additional students to an on site class.

### Content

- An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.

### Labs

- Portable classroom labs
- Field training on the site in agreement with the customer

### Course information

Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>

### Course details

Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>Practical user</li> <li>This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having already some basic experience with IR thermography,</li> <li>knowing the basic functions of the camera,</li> <li>who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Be familiar with the basic operation of an infrared camera</li> <li>Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This 2-day course consists of lectures on theoretical subjects, plus hands-on.

After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer (includes estimation of  $T_{\text{Refl}}$  and the emissivity) (with practice)
- Thermography equipment
- Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR

### Labs

- Measurements and software exercises

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-EXP-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

**P/N: ITC-EXP-2036**

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

This partnumber is reserved for adding additional students to a fever screening on site class.

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

General description	
These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.	
Content	
<ul style="list-style-type: none"> <li>System requirements</li> <li>Configuration</li> <li>Analyzing functions</li> <li>Templates</li> <li>Reporting functions</li> <li>Data exchange</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>System set up</li> <li>Data import</li> <li>Data analysis</li> <li>Creating templates</li> <li>Creating reports</li> <li>Exporting data</li> <li>Triggering</li> </ul>	
Course information	
Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Consultants interested in reporting</li> <li>Building inspectors with reporting needs</li> <li>R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> </ul>
Course details	
Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

### General description

The lens is a popular lens accessory and provides approximately 2× magnification compared to the standard lens. Ideal for small or distant targets such as overhead power lines.

### Imaging and optical data

Field of view (FOV)	11.7° × 8.78°/9.65° × 7.24°
Minimum focus distance	1.2 m (3.93 ft.)
Focal length	71.5 mm (28.1 in.)
Spatial resolution (IFOV)	0.64 mrad/0.53 mrad
F-number	1.0
Lens note	When two pieces of data are separated by “/” the first piece of data is for cameras with a serial number starting with 218, 234, 236 or 250 and the second piece of data is for cameras with a serial number starting with 253

### General description

This course bridges the gap between IR thermography, background science and application theory. The participant will learn the physical concepts of heat transfer and apply them together with relevant building science. After the course, the participant will be able to do a qualified building inspection on the base of existing laws, standards, and regulations.

Note: This course refers mainly to European building standards. Please consult ITC before selling it in other countries.

### Content

- Introduction and refresher of IR basics
- Thermal transfer and wall structures
- Insulating materials
- Humidity, moisture, and the dew point
- Air leaks, pressure profiles, and air permeability
- Survey methodology

### Labs

- Outside inspection
- Air permeability test (with Blower Door)
- Reporting

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Professional users in building applications who want to become experts in Building Thermography.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Has a background in a building profession, but rather moderate experience in IR or has experience in another IR application field but rather moderate knowledge in building science</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Knowledge of building techniques</li> <li>• Bring own PC for calculations and exercises</li> </ul>

### General description

This course bridges the gap between IR thermography, background science and application theory. The participant will learn fundamental concepts of heat and chemistry, to setup and to operate the furnace camera, and to adjust it for environmental conditions related to furnace applications.

Lab and/or field practice is a key part of this class. Basic inspection procedures will be covered including equipment checkout, route planning, permitting requirements, safety practices/equipment and reporting concepts.

This partnumber is reserved for adding additional students to an advanced furnace application on site class.

### Content

- Introduction
- Working environment (refineries, units, furnaces)
- General rules, camera set up and operation
- On site job organization and related procedures
- Basics of radiative thermal transfer
- Principles and limitations of IR furnace applications
- Discussion and evaluation of inspection and measurement results
- Methodology
- Reporting

### Labs

- On site job organization
- Follow the site inspection procedure
- Site measurements
- If possible, field work on-site inspecting real equipment

### Course information

Available languages	English, French
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR furnace cameras such as the FLIR GF309.</li> <li>• Users of models like AGEMA 550, Inframetrics 290/390, FLIR ThermoCAM P25F/P50F</li> <li>• Qualified thermographers who want to learn more about furnace applications</li> <li>• Non thermographers who want to learn how to use GF cameras or other cameras suited for furnace applications for measurements in their industry</li> </ul>

### Content

- Introduction
- Working environment (refineries, units, furnaces)
- General rules, camera set up and operation
- On site job organization and related procedures
- Basics of radiative thermal transfer
- Principles and limitations of IR furnace applications
- Discussion and evaluation of inspection and measurement results
- Methodology
- Reporting

### Labs

- On site job organization
- Follow the site inspection procedure
- Site measurements
- If possible, field work on-site inspecting real equipment

### Course information

Available languages	English, French
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR furnace cameras such as the FLIR GF309.</li> <li>• Users of models like AGEMA 550, Inframetrics 290/390, FLIR ThermoCAM P25F/P50F</li> <li>• Qualified thermographers who want to learn more about furnace applications</li> <li>• Non thermographers who want to learn how to use GF cameras or other cameras suited for furnace applications for measurements in their industry</li> </ul>

**P/N: ITC-ADV-3056**

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person working with furnace applications in the industry and/or with surveillance and/or predictive maintenance and rather moderate knowledge on IR thermography or</li> <li>A person from another IR application field, with rather moderate knowledge about furnace applications and not too much experience of GF cameras.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Basic understanding and knowledge of natural sciences</li> <li>Technical background</li> </ul>
Course details	
Duration	3 days, additional days upon request (ITC-ADV-4006)
Structure	Theory classes with integrated hands-on during day one and the morning of day two and three, practical labs respective exam in the afternoon of day two and three.
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>ITC qualified instructor teaching the class</li> <li>Training material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> <li>Might include more, such as lunch, refreshments, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Note	This course can only be booked via ITC due to the FLIR GF camera export restrictions.
Course organization	
ITC	The ITC Advanced Furnace Application Course is offered worldwide by ITC subsidiaries. Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	The ITC Advanced Furnace Application is lectured by qualified ITC trainers with special expertise in handling the GF cameras and furnace applications.

### General description

This course bridges the gap between IR thermography, background science and application theory. The participant will learn fundamental concepts of heat and chemistry, to setup and to operate the GasFindIR camera, and to adjust it for environmental conditions to find gas leaks.

Lab and/or field practice in finding leaks is a key part of this class. Basic inspection procedures will be covered including equipment checkout, route planning, permitting requirements, safety practices/equipment and reporting concepts. After the course, the participant will be able to do qualified inspections on the base of existing laws, standards, and regulations.

Note 1: This course can only be booked via ITC due to the GasFindIR camera export restrictions. Please inform ITC if the customer has an MW or LW GasFindIR camera.

Note 2: This partnumber is reserved for adding additional students to a gas detection on site class.

### Content

- Introduction
- Camera set up and operation
- Thermal science fundamentals
- Heat transfer
- IR theory
- VOC absorption characteristics
- Survey and reporting
- Safety considerations

### Labs

- Hands-on and practical exercises during the afternoon of day 2.
- If possible, field work on-site inspecting real equipment, if not exercises on ITC's special tailored GasFindIR lab equipment.

Available languages	English, French
Target group	<ul style="list-style-type: none"> <li>Qualified thermographers who want to learn more about the special application volatile gas detection within the petrochemical industry with an infrared MW camera.</li> <li>Non thermographers who want to learn how to use their GasFindIR or FLIR GF MW camera to complement or replace existing LDAR (Leak Detection And Repair) techniques in the petrochemical industry.</li> <li>Qualified thermographers who want to learn more about the special application volatile gas detection for surveillance of electrical equipment with an infrared LW camera.</li> <li>Non thermographers who want to learn how to use their GasFindIR or FLIR GF LW camera to complement or replace existing LDAR (Leak Detection And Repair) techniques.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person working in the petrochemical industry with surveillance and/or predictive maintenance and rather moderate knowledge on IR thermography or</li> <li>A person working with surveillance and/or predictive maintenance of electrical equipment and rather moderate knowledge on IR thermography or</li> <li>A person from another IR application field, with rather moderate knowledge about VOC gases and not too much experience of the specific GasFindIR or FLIR GF3xx camera.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Basic understanding and knowledge of natural sciences</li> <li>Technical background</li> </ul>
Course details	
Duration	3 days, additional days upon request (ITC-ADV-4006)
Structure	Theory classes with integrated hands-on during day one and the morning of day two and three, practical labs respective exam in the afternoon of day two and three.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>ITC licensed instructor teaching the class</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Note	This course can only be booked via ITC due to the GasFindIR and GF camera export restrictions. Please inform ITC if the customer has an MW or LW GasFindIR or GF camera.
Course organization	
ITC	The ITC Advanced Gas Detection Course is offered worldwide by ITC subsidiaries. Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	T560392 Trainers teaching courses lists all licensed trainers and ITC trainers authorized to teach the ITC Advanced Gas Detection Courses.

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. Additional days can be booked (ITC-ADV-3006). After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

- Customized

### Course information

Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Advanced users who wish to receive an in-depth guidance to complex problems related to infrared equipment, applications, and measurement questions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Industry technical personnel</li> <li>• Researchers</li> <li>• Scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics

**P/N: ITC-EXP-1050**

© 2015, FLIR Systems, Inc.

#ITC-EXP-1050; r. 23306; en-US

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Consultancy by qualified ITC specialist</li> <li>Training and/or reference material</li> </ul>
Note	Consultancy is typically carried out at the customer's site. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	ITC consultancy is offered by ITC in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	ITC consultancy is delivered by ITC qualified specialists having the relevant expertise in infrared measurement and the related fields of application.

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

Course information	
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	<p>Standard: 2 days</p> <p>Upon request: Additional day including complementary topics</p> <p>Upon request: 1 day only (for experienced users with sufficient theoretical background)</p>
Structure	Theory and hands-on
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 4 persons</li> <li>Might include more, such as lunch, refreshments, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Note	<p>This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.</p>
Course organization	
ITC	<p>The course "ITC In-house R&amp;D training ATS products" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.</p>
ITC Trainers and Licensed Trainers	<p>The course "ITC In-house R&amp;D training ATS products" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.</p>

### General description

An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

This partnumber is reserved for adding additional students to an on site class.

### Content

- An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.

### Labs

- Portable classroom labs
- Field training on the site in agreement with the customer

### Course information

Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>

### Course details

Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of photovoltaic solar systems.

During the first day, you learn about the basics of thermography, how a thermal camera works, and how to use it correctly. The second day starts with the basics of photovoltaic solar systems and solar panel installations. You learn about IR metrological particularities that are critical for solar panel inspections with a thermal camera, how to interpret the displayed thermal images, and in which way they can be associated to typical problems and faults. Emphasis is put on case studies, selected from the field, as well as practical exercises.

### Content

- Basics of thermography (radiation, spectral waveband, influences of the atmosphere)
- IR camera: principle, design and operation (FPA, measurement ranges, thermal tuning: level and span, color palettes)
- IR measurement technique: measurement parameters (emissivity, radiation from the environment, distance, relative humidity, atmospheric temperature)
- IR Camera figures of merit: resolution limits (thermal, spatial, time related)
- Practical exercises
- Basics of photovoltaic solar systems (terminology, design, principle of operation, module types)
- Solar panel installation: connection types (string, bypass diodes, shadowing)
- IR metrological particularity (spectral bands, inspection conditions, spatial resolution, camera positioning and angle)
- Typical thermal readouts (examples, causes and interpretation – defect/no defect, practical exercises)

### Course information

Available languages	English, French, German, Swedish, Italian, Dutch, Spanish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in the use of IR thermography for the inspection of photovoltaic solar systems.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person working with maintenance or installation of solar panels.</li> <li>• Thermographers familiar with electrical inspections and interested in solar panel inspections.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge in electrical installations or another technical field.</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos and practical labs alternate.

### General description

This 2-day course consists of lectures on theoretical subjects, plus hands-on.

After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer (includes estimation of  $T_{\text{Refl}}$  and the emissivity) (with practice)
- Thermography equipment
- Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR

### Labs

- Measurements and software exercises

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-EXP-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for the inspection of buildings. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography and how to use your camera the best way. The second day you will start with a brief reminder of thermal transfers before you learn about the building envelope, important physical parameters and typical faults. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Basics of heat transfer
- The building envelope
- Important physical parameters
- Major anomalies
- Thermal patterns
- Application guidelines
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Building application labs

### Course information

Available languages	English, French, German, Swedish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and building applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person from the building sector</li> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• Students and pupils with thermography and building application related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

## ITC Short course building thermography - inclusive 10 pers. (2 days)

### P/N: ITC-EXP-2019

© 2015, FLIR Systems, Inc.

#ITC-EXP-2019; r. 23306; en-US

Course details	
Duration	2 days
Structure	Theory, camera handling, demos and practical labs alternate.
Exam	None
Course fee includes	<ul style="list-style-type: none"><li>• Tuition by qualified ITC instructor</li><li>• Training material in printed format</li><li>• Diploma of attendance</li><li>• Attendance of a group up to 10 persons</li><li>• Might include more, such as refreshments, lunch, instructor's travel expenses, etc. depending on location and organizing entity</li></ul>
Course organization	
ITC	The "ITC Short Course Building Thermography" is offered worldwide by ITC and partners. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The "ITC Short Course Building Thermography" is lectured by qualified ITC instructors with special experience in the field of building applications.

### Compatible with the following products

- 60101-0101; FLIR i3
- 60101-0201; FLIR i5
- 60101-0102; FLIR i3 with POS display
- 60101-0202; FLIR i5 with POS display

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of electrical systems. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography and how to use your camera the best way. The second day you will start with a brief reminder of thermal transfers before you learn about electrical systems and components, material properties, typical problems and faults. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Basics of heat transfer
- Electrical systems
- Important properties of material
- Most common problems
- Case studies
- Common mistakes
- Application guidelines
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Electrical application labs

### Course information

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

This partnumber is reserved for adding additional students to a fever screening on site class.

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of heating and HVAC systems, and related installations. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography, and how to use your camera the best way. The second day you will get introduced to various heating systems before you learn about typical faults and how thermography helps you to locate and analyze these. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Heating systems
- Pipe tracing and localization of water circuits
- Water leaks
- Moisture and humidity
- Water radiators
- Tanks, manifolds and plenums
- HVAC systems
- Industrial heat exchangers
- Photovoltaic panel inspection
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Application labs

### Course information

Available languages	English, French, German, Italian, Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Beginners and anybody interested in IR thermography, plumbing and HVAC applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Plumbers or persons working with plumbing and or/HVAC systems</li> <li>• Facility managers</li> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos and practical labs alternate.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

### 8.1 Welcome to ITC, the leading source of knowledge within infrared science and its applications

ITC is present in over 50 countries, and has instructors that speak 22 native languages. We offer everything from short introduction courses to certification courses. Our instructors are among the most knowledgeable people in the industry. ITC is proud that its products and services are compliant with industry, national, and international standards. Join our community, our conferences, or our courses at:

- <http://www.infraredtraining.com>
- <http://www.irtraining.eu>

### 8.2 Level 1 to 3 thermography courses

These courses prepare you for qualification as a certified thermographer. You will learn about infrared physics, camera technology, and thermographic applications and inspections at different levels. The courses include exercises, field studies, discussions, and traditional teaching classes, and end with a closed-book exam.

### 8.3 Advanced application courses

These interdisciplinary courses bridge the gap between infrared thermography, background science, and application theory. You will learn about important scientific concepts in, for example, physics, heat science, and chemistry. You will apply them together with relevant application theory, and thus be able to perform qualified inspections within your field of application on the basis of existing laws, standards, and regulations. The courses end with an exam. A prerequisite for these courses is a valid Level 1 certificate.

### 8.4 Short courses

These courses provide you with the most important basics of infrared thermography theory and applications, camera operation, and software usage. You will learn about the basics of emissivity and reflected apparent temperature and course-related applications. During the hands-on sessions you will operate a camera in different measurement situations. You will also learn how to analyze and report your findings. The courses include practical exercises and key laboratory sessions.

### 8.5 E-learning

Self-paced 24/7 on-demand online courses are available for infrared thermography basics, different applications, and camera handling. Visit <http://www.irtraining.com>.

### 8.6 In-house classes

On-site training can be customized to your needs. Participants will learn about infrared thermography, inspections, measurements, applications, and reporting corresponding to the level needed to perform measurements and inspection in their working environment. The trainer will provide useful advice on how to best implement infrared thermography in your business.

### 8.7 Software courses

In these hands-on classes you will learn to use the relevant FLIR Systems software for your needs. Depending on the software, the emphasis will be on analysis and reporting or camera connection, data acquisition, and analysis.

### 8.8 System training

Certain cameras and infrared measurement equipment require deeper understanding of the software and hardware components. In training classes for CVS, ATS, and automation cameras and products, you will learn about installation, configuration, and integration of the entire system for different applications. You will also learn about image acquisition optimization and image analysis.

### 8.9 Workshops and conferences

In many countries, ITC offers workshops and conferences on different infrared applications as well as user meetings. For information about InfraMation, the world's largest annual infrared applications conference, visit:

<http://www.inframation.org>

For the R&D and automation conference, infraR&D, visit:

<http://www.infraredforum.eu>

### 8.10 Contact details

- ITC Global operations: [itc@flir.se](mailto:itc@flir.se)
- ITC Americas: <http://www.infraredtraining.com>
- ITC EMEA: <http://www.irtraining.eu>
- [info@irtraining.eu](mailto:info@irtraining.eu)

### 9.1 FLIR Systems' qualifications

FLIR Systems is the world's largest manufacturer of commercial-grade infrared cameras, with over 50 years' experience. FLIR Systems builds state-of-the-art, high-performance, field-worthy infrared cameras. We're serious about our infrared cameras and the accuracy of the temperature measurements they produce. It's our core business—and it's our only business. FLIR Systems Service is ISO 9001:2000 certified.

### 9.2 FLIR Systems service

The FLIR Systems service team's mission is to provide the world's best service and support for your high-performance FLIR Systems infrared camera and accessories. FLIR Systems offers a variety of service packages to help you gain the most from your investment in a FLIR Systems infrared camera. FLIR Systems also recommends its FLIR Systems 14 Point Inspection & Calibration program on an annual basis to ensure correct temperature readings.

### 9.3 Service and support

FLIR Systems is committed to providing you with superior customer service and infrared camera support. Our customer service staff is available to take your calls during regular business hours. We have skilled technicians ready to assist you! Software and application support can be found 24 hours a day at:

<http://support.flir.com>

#### **9.4 Documentation downloads**

At <http://support.flir.com> you can search among more than 1700 manuals, mechanical drawings, and CAD data files from FLIR Systems (over 220,000 pages of technical information). The collection also includes manuals for our obsolete products, as well as manuals from our predecessors and acquired companies AGA, Agema, FSI, Inframetrics, Indigo Systems, and Cedip. Downloading documentation requires a simple customer registration.

#### **9.5 Software downloads**

At <http://support.flir.com> you can also download evaluation versions of our software, as well as service packs, patches, bug fixes, etc. Downloading software requires a simple customer registration.

#### **9.6 Downloads of datasheets and product catalogs**

At <http://support.flir.com> we also provide datasheets and product catalogs for all our products. These publications are re-published every night (CET) to make sure that they contain the very latest information. They are available in A4 and US letter sizes. No customer registration is needed to download these publications.

ITC In-house training - group up to 10 pers. (per day) .....	1069, 1218, 1351, 1540, 1747, 1951, 2158, 2390, 2603, 2751, 2953, 3127, 3270, 3467, 3760, 3969, 4195, 4469, 4583, 4728
ITC Infrared application and system consultancy (per day).....	2596, 2744, 2944, 3120, 3263, 3458, 4186, 4462, 4719
ITC Level 1 Thermography Course – group of 10 pers. ....	1081, 1230, 1363, 1552, 1759, 1963, 2170, 2402, 2763, 2965, 3139, 3282, 3479, 3772, 3981, 4207, 4481, 4595, 4740
ITC Level 1 Thermography Course - additional student to on site class, 1 pers .....	1073, 1222, 1355, 1544, 1751, 1955, 2162, 2394, 2755, 2957, 3131, 3274, 3471, 3764, 3973, 4199, 4473, 4587, 4732
ITC Level 1 Thermography Course - attendance, 1 pers.....	1077, 1226, 1359, 1548, 1755, 1959, 2166, 2398, 2759, 2961, 3135, 3278, 3475, 3768, 3977, 4203, 4477, 4591, 4736
ITC Level 2 Thermography Course – group of 10 pers. ....	1242, 1375, 1564, 1771, 1975, 2182, 2414, 2775, 2977, 3151, 3294, 3491, 3784, 3993, 4219, 4493, 4607, 4752
ITC Level 2 Thermography Course - additional student to on site class, 1 pers .....	1234, 1367, 1556, 1763, 1967, 2174, 2406, 2767, 2969, 3143, 3286, 3483, 3776, 3985, 4211, 4485, 4599, 4744
ITC Level 2 Thermography Course - attendance, 1 pers.....	1238, 1371, 1560, 1767, 1971, 2178, 2410, 2771, 2973, 3147, 3290, 3487, 3780, 3989, 4215, 4489, 4603, 4748
ITC Practical Course - Solar panel inspection - attendance, 1 pers (2 days).....	1085, 1246, 1568, 1775, 2186, 2418, 3788, 4223, 4756
ITC Practical Course - Solar panel inspection - group up to 10 pers (2 days).....	1088, 1249, 1571, 1778, 2189, 2421, 3791, 4226, 4759
ITC R&D basics for industry users - group up to 6 pers. (2 days) .....	2779, 2981, 3155, 3298, 3495, 4229, 4611, 4762
ITC Short course building thermography - inclusive 10 pers. (2 days).....	1091, 1379, 1574, 1979, 2424, 3997, 4765

ITC Short course building thermography -attendance 1 pers. (2 days).....	1093, 1381, 1576, 1981, 2426, 3999, 4767
ITC Short course electrical thermography - attendance 1 pers. (2 days) .....	1095, 1252, 1578, 1781, 2192, 2428, 3794, 4232, 4769
ITC Short course electrical thermography - inclusive 10 pers. (2 days) .....	1098, 1255, 1581, 1784, 2195, 2431, 3797, 4235, 4772
ITC Short course Fever Screening - additional student to on site class (2 days).....	2782, 2984, 3158, 3301, 3498, 4614, 4775
ITC Short course Fever Screening - attendance 1 pers. (2 days).....	2785, 2987, 3161, 3304, 3501, 4617, 4778
ITC Short course Fever Screening - inclusive 10 pers. (2 days).....	2788, 2990, 3164, 3307, 3504, 4620, 4781
ITC Short course HVAC and plumbing - attendance 1 pers (2 days).....	1101, 1383, 1584, 1983, 2434, 4001, 4784
ITC Short course HVAC and plumbing - group up to 10 pers (2 days) .....	1103, 1385, 1586, 1985, 2436, 4003, 4786
ITC Short course Introduction to thermography -inclusive 10 pers. (1 day).....	1105, 1258, 1387, 1588, 1787, 1987, 2198, 2438, 2791, 2993, 3167, 3310, 3507, 3800, 4005, 4238, 4623, 4788
ITC Short course Introduction to thermography -attendance 1 pers. (1 day) .....	1109, 1262, 1391, 1592, 1791, 1991, 2202, 2442, 2795, 2997, 3171, 3314, 3511, 3804, 4009, 4242, 4627, 4792
ITC Short courses - group of max. 6 pers, additional day 3 for on-site training .....	3001, 3515, 4246, 4796
ITC Software course - attendance 1 pers. (per day) .....	1113, 1266, 1395, 1596, 1795, 1995, 2206, 2446, 2607, 2799, 3003, 3175, 3318, 3517, 3808, 4013, 4248, 4497, 4631, 4798
ITC Software course - group up to 10 pers. (per day).....	1117, 1270, 1399, 1600, 1799, 1999, 2210, 2450, 2611, 2803, 3007, 3179, 3322, 3521, 3812, 4017, 4252, 4501, 4635, 4802
ITC Training 1 day - attendance 1 pers. ....	1121, 1274, 1403, 1604, 1803, 2003, 2214, 2454, 2615, 2807, 3011, 3183, 3326, 3525, 3816, 4021, 4256, 4806
ITC Training 1 day - group up to 10 pers. ....	1125, 1278, 1407, 1608, 1807, 2007, 2218, 2458, 2619, 2811, 3015, 3187, 3330, 3529, 3820, 4025, 4260, 4810
ITC Training 2 days - attendance 1 pers. ....	1129, 1282, 1411, 1612, 1811, 2011, 2222, 2462, 2623, 2815, 3019, 3191, 3334, 3533, 3824, 4029, 4264, 4814
ITC Training 2 days - group up to 10 pers. ....	1133, 1286, 1415, 1616, 1815, 2015, 2226, 2466, 2627, 2819, 3023, 3195, 3338, 3537, 3828, 4033, 4268, 4818
ITC Training 3 days - attendance 1 pers. ....	1137, 1290, 1419, 1620, 1819, 2019, 2230, 2470, 2631, 2823, 3027, 3199, 3342, 3541, 3832, 4037, 4272, 4822
ITC Training 3 days - group up to 10 pers. ....	1141, 1294, 1423, 1624, 1823, 2023, 2234, 2474, 2635, 2827, 3031, 3203, 3346, 3545, 3836, 4041, 4276, 4826
ITC Training FLIR Software - attendance 1 pers. (1 day) .....	1145, 1628, 1827, 2027, 2238, 2478, 3840, 4045, 4280, 4830
ITC Training FLIR Software - attendance 1 pers. (2 days) .....	1147, 1630, 1829, 2029, 2240, 2480, 3842, 4047, 4282, 4832
ITC travel time for instructor .....	1149, 1632, 1831, 2031, 2242, 2482, 2639, 2831, 3035, 3207, 3350, 3549, 3844, 4049, 4284, 4334, 4834
