General description	
Cardboard box with plastic handle for the A3xx, A3xxsc, A6xx and A6xxsc series. Holds all items neatly.	
Physical data	
Weight	0.86 kg (1.9 lb.)
Size (L x W x H)	455 x 300 x 165 mm (17.9 x 11.8 x 6.5 in.)
Material	Cardboard
Shipping information	
Packaging, type	Cardboard box
List of contents	• Transport case
Packaging, weight	1.25 kg (2.76 lb.)
Packaging, size	495 x 370 x 192 mm (19.5 x 14.6 x 7.6 in.)
EAN-13	7332558008324
UPC-12	845188008673
Country of origin	Sweden

### Compatible with the following products

- 48201-1001; FLIR A300
- 42701-1001; FLIR A300 (9 Hz)
- 42901-1001; FLIR A305sc
- 48201-1101; FLIR A310
- 42701-1101; FLIR A310 (9 Hz)
- 48001-1101; FLIR A315
- 42901-1101; FLIR A315 (9 Hz)
- 48201-1201; FLIR A320 Tempscreen
- 42701-1201; FLIR A320 Tempscreen (9 Hz)
- 48001-1001; FLIR A325sc
- 55001-0101; FLIR A615 15°
- 55001-0102; FLIR A615 25°
- 55001-0103; FLIR A615 45°
- 55001-0104; FLIR A615 7°

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

### General description

FLIR Tools Mobile is an intuitive Android app for analyzing, managing, and distributing infrared images.

#### Key features:

- Remote control
- MSX
- Images with sketch on DC and IR
- Images with field of view follow
- Editable text comments
- Emissivity table
- Import images from your Wi-Fi-enabled camera.
- Connect and stream infrared images from the camera.
- Connect and stream measurement data from FLIR Test & Measurement meters
- Lay out and move measurement tools on the image.
- Read out temperature measurements.
- Create and configure temporal plots based on results of measurement tools on the infrared image.
- Log measurement data and export it as a \*.csv file.
- Save a measurement scenario as a data snapshot.
- Zoom in on images.
- On the Android device, remotely take snapshots when a camera is connected.
- On the camera, take snapshots that will automatically be saved on the Android device.
- Delete images on the Android device.
- Display an image's GPS coordinates on Google Maps.
- Create and e-mail reports.
- Save images in the Android device photo library.
- Send images to FTP sites and other file-sharing services (Dropbox, Box.net, etc.).
- Display image information, e.g., object parameters, text comments, and file details.
- Play back voice comments.
- Change the level and span.
- Change general settings in the app.
- Change the palette.

### Download

The application can be downloaded from Android Market or Amazon Marketplace, see the link below.

### General description

FLIR Tools Mobile lets professional thermographers use an iPad, iPhone, or iPod touch to see and capture live, streaming infrared video and stills from select FLIR cameras.

With FLIR Tools Mobile the camera can be stationed in one area and operated wirelessly from another – highly useful for IR inspections of energized equipment or performing IR surveys in hard-to-reach locations and harsh working environments. Streaming video and remote access also gives decision makers and others on your team a valuable opportunity to observe and collaborate in the thermal imaging process.

Using FLIR Tools Mobile, you can do one or more of the following:

- Import images from your infrared camera
- Lay out and move measurement tools on the image
- Read out temperature measurements
- Zoom in on images
- On the iPhone/iPad, remotely take snapshots when a camera is connected
- On the camera, take snapshots that will automatically be saved in the iPhone/iPad
- Delete any images on the iPhone/iPad
- Display an image's GPS coordinates on Google Maps
- Create and e-mail imagesheets
- Create and e-mail reports
- Print imagesheets and reports to any AirPrint-enabled printer
- Save images to iPhone/iPad photo library
- Send images to FTP sites and other file sharing services (Dropbox, Box.net, etc.)
- Display image information, such as object parameters, text comments, file information, etc.
- Play-back voice comments
- Change level and span
- Change general settings in the app
- Change palette

General description	
ThermoVision™ System Developers Kit	
Key features:	
<ul style="list-style-type: none"> <li>• Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces.</li> <li>• Gives the user full control of the camera.</li> <li>• Allows the user to set alarm conditions and measurement functions in the camera</li> <li>• Allows the user to define I/O functionality (FLIR A series).</li> <li>• Based on ActiveX technology.</li> <li>• Supports acquisition of images through FireWire™, Ethernet, and USB interfaces.</li> <li>• Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf).</li> <li>• Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities.</li> <li>• Allows 16-bit temperature linear outputs from FLIR A series cameras.</li> <li>• Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc.</li> <li>• Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.</li> </ul>	
Users with licenses for the previous version can download a free upgrade via the following link: <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=62">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=62</a>	
Release notes	
Version	ThermoVision 2.6 SP2
New features	<ul style="list-style-type: none"> <li>• — News in SP2:</li> <li>• Support for FLIR GF3XX series</li> <li>• Support for windowing in FLIR A615 and FLIR SC6x5</li> <li>• Support for windowing in FLIR SC6x0</li> <li>• Various bug fixes</li> </ul>

General description	
<p>The ThermoVision LabVIEW Toolkit is a set of VIs (virtual instruments) for cameras that support alarms, measurement functions, and I/O functionality.</p> <p>Through LabVIEW, you can use these VIs as sub-VIs to manage communications with a FLIR IR camera in digital mode.</p> <p>You can also generate true temperature images from images acquired through LabVIEW, and can use the LabVIEW IR Measurement and Display tools to analyze the temperatures of imaged objects.</p>	
Key features:	
<ul style="list-style-type: none"> <li>Set up communications between LabVIEW VI and a FLIR IR camera</li> <li>Capture and collect images via FireWire or Ethernet interfaces</li> <li>Adjust the camera configuration parameters and focus as you view a live image</li> <li>Control the camera calibration</li> <li>Send any other camera command to the camera</li> <li>Generate a true temperature image from a 16-bit image acquired using the camera's FireWire or Ethernet interfaces</li> <li>Close communications to the IR camera</li> </ul>	
<p>Users with licenses for the previous version can download a free upgrade via the following link:  <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63</a></p>	
Note: Only supports National Instrument 32-bit Labview	
Release notes	
Version	3.3
New features	<ul style="list-style-type: none"> <li>Windows 7 32- and 64-bit support</li> <li>Support for FLIR A615 and FLIR SC6X5 (including windowing)</li> <li>Support for windowing in FLIR SC660</li> <li>Various bug fixes</li> <li>New example VIs</li> </ul>

## General description

The Extended Warranty Package covers parts and labour for your IR camera, consumables not included. FLIR Systems warrants its products to be free from defects caused by faulty material or poor workmanship, for a period specified above. **NO PRODUCT IS WARRANTED TO BE MERCHANTABLE OR FIT FOR ANY PARTICULAR USE OR APPLICATION.** The warranty is void if the buyer damages the item due to misuse, abuse, modification, processing, or integration with other items. FLIR Systems' maximum liability under this warranty is limited to the obligation to replace or, at its sole option, to credit Buyer's account up to the purchase price.

### General description

General Maintenance package offers a complete 14 points inspection and calibration service (for one lens combination). Shipping cost not included.

#### 14-point inspection program:

- Perform a complete operational check.
- Fusion calibration and laser alignment, when applicable.
- Verify all internal cable and PCB connections.
- Clean the viewfinder and check the optics.
- Upgrade the internal camera software to the latest revisions.
- Perform minor repairs.
- Verify and/or re-equalize as needed each temperature range for image uniformity.
- Verify standard lens calibration (optional: other or specially engineered lenses).
- Verify ambient temperature compensation as needed.
- Recalibration to ensure factory specifications are met.
- Calibrate temperature ranges up to +1500°C, when applicable.
- Perform a quality-approved acceptance test procedure.
- Provide a calibration label with the next due date.
- Provide a calibration certificate (optional: extended calibration certificate with measured values).

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. Additional days can be booked (ITC-ADV-3006). After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

Course information	
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-ADV-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Might include more, such as lunch or refreshments, depending on location and the organizing entity</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. For open classes, please contact your closest ITC, ITC partner or FLIR sales representative.
Course organization	
ITC	The course "ITC Advanced Thermal Measurements (R&D)" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC Advanced Thermal Measurements (R&D)" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. Additional days can be booked (ITC-ADV-3006). After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

General description	
An additional day can be booked when the customer wants to extend the training content, software exercises or guided field practice.	
The third day can be added to the following courses:	
ITC-ADV-3046	
Content	
<ul style="list-style-type: none"> <li>Customized, build on the topics of the course prior to the additional day</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized, depending on the equipment used and the application of interest</li> </ul>	
Course information	
Available languages	English, other languages upon demand
Target group	<ul style="list-style-type: none"> <li>Participants of advanced courses that are delivered on-site</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Persons with special interests in the equipment and their application requesting in-depth training or additional guidance.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites of the course prior to the additional day</li> </ul>
Course details	
Duration	1 day
Structure	Customized upon the customer's request
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>ITC qualified instructor teaching the class</li> <li>Training material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> <li>Might include more, such as lunch, refreshments, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

Course organization	
ITC	ITC customized workshops are offered worldwide by ITC and partners. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	ITC customized workshops are lectured by ITC qualified specialists having the relevant expertise in the workshop's subject and the related fields of application.

**Compatible with the following products**

- 62319-0101; FLIR A15 f=19 mm
- 64319-0101; FLIR A15 f=19 mm (7.5 Hz)

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

- Customized

### Course information

Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Advanced users who wish to receive an in-depth guidance to complex problems related to infrared equipment, applications, and measurement questions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Industry technical personnel</li> <li>• Researchers</li> <li>• Scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Consultancy by qualified ITC specialist</li> <li>Training and/or reference material</li> </ul>
Note	Consultancy is typically carried out at the customer's site. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	ITC consultancy is offered by ITC in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	ITC consultancy is delivered by ITC qualified specialists having the relevant expertise in infrared measurement and the related fields of application.

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

### General description

An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

This partnumber is reserved for adding additional students to an on site class.

### Content

- An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.

### Labs

- Portable classroom labs
- Field training on the site in agreement with the customer

### Course information

Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>

### Course details

Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>Practical user</li> <li>This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having already some basic experience with IR thermography,</li> <li>knowing the basic functions of the camera,</li> <li>who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Be familiar with the basic operation of an infrared camera</li> <li>Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>Practical user</li> <li>This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having already some basic experience with IR thermography,</li> <li>knowing the basic functions of the camera,</li> <li>who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Be familiar with the basic operation of an infrared camera</li> <li>Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

#### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

#### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

#### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

#### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

#### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

#### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

General description	
This 2-day course consists of lectures on theoretical subjects, plus hands-on.	
After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.	
Content	
<ul style="list-style-type: none"> <li>• Introduction</li> <li>• Review on thermal transfer</li> <li>• Radiative heat transfer (includes estimation of T<sub>Refl</sub> and the emissivity) (with practice)</li> <li>• Thermography equipment</li> <li>• Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>• Measurements and software exercises</li> </ul>	
Course information	
Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-EXP-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

**P/N: ITC-EXP-2036**

© 2015, FLIR Systems, Inc.

#ITC-EXP-2036; r. 23306; en-US

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

This partnumber is reserved for adding additional students to a fever screening on site class.

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

## General description

Compared to FLIR Tools, FLIR Tools+ has the following features:

- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting

FLIR Tools/Tools+ is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

FLIR Tools+ main features:

- Manual IR/Visual Image Grouping
- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting - Microsoft Office 2007 (32bit), and 2010 (32bit) support
- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

### Download

This software is a freeware. To download, click the following link:

General description
FLIR Tools Mobile is an intuitive Android app for analyzing, managing, and distributing infrared images.
Key features:
<ul style="list-style-type: none"> <li>• Remote control</li> <li>• MSX</li> <li>• Images with sketch on DC and IR</li> <li>• Images with field of view follow</li> <li>• Editable text comments</li> <li>• Emissivity table</li> <li>• Import images from your Wi-Fi-enabled camera.</li> <li>• Connect and stream infrared images from the camera.</li> <li>• Connect and stream measurement data from FLIR Test &amp; Measurement meters</li> <li>• Lay out and move measurement tools on the image.</li> <li>• Read out temperature measurements.</li> <li>• Create and configure temporal plots based on results of measurement tools on the infrared image.</li> <li>• Log measurement data and export it as a *.csv file.</li> <li>• Save a measurement scenario as a data snapshot.</li> <li>• Zoom in on images.</li> <li>• On the Android device, remotely take snapshots when a camera is connected.</li> <li>• On the camera, take snapshots that will automatically be saved on the Android device.</li> <li>• Delete images on the Android device.</li> <li>• Display an image's GPS coordinates on Google Maps.</li> <li>• Create and e-mail reports.</li> <li>• Save images in the Android device photo library.</li> <li>• Send images to FTP sites and other file-sharing services (Dropbox, Box.net, etc.).</li> <li>• Display image information, e.g., object parameters, text comments, and file details.</li> <li>• Play back voice comments.</li> <li>• Change the level and span.</li> <li>• Change general settings in the app.</li> <li>• Change the palette.</li> </ul>
Download
The application can be downloaded from Android Market or Amazon Marketplace, see the link below.

### General description

FLIR Tools Mobile lets professional thermographers use an iPad, iPhone, or iPod touch to see and capture live, streaming infrared video and stills from select FLIR cameras.

With FLIR Tools Mobile the camera can be stationed in one area and operated wirelessly from another – highly useful for IR inspections of energized equipment or performing IR surveys in hard-to-reach locations and harsh working environments. Streaming video and remote access also gives decision makers and others on your team a valuable opportunity to observe and collaborate in the thermal imaging process.

Using FLIR Tools Mobile, you can do one or more of the following:

- Import images from your infrared camera
- Lay out and move measurement tools on the image
- Read out temperature measurements
- Zoom in on images
- On the iPhone/iPad, remotely take snapshots when a camera is connected
- On the camera, take snapshots that will automatically be saved in the iPhone/iPad
- Delete any images on the iPhone/iPad
- Display an image's GPS coordinates on Google Maps
- Create and e-mail imagesheets
- Create and e-mail reports
- Print imagesheets and reports to any AirPrint-enabled printer
- Save images to iPhone/iPad photo library
- Send images to FTP sites and other file sharing services (Dropbox, Box.net, etc.)
- Display image information, such as object parameters, text comments, file information, etc.
- Play-back voice comments
- Change level and span
- Change general settings in the app
- Change palette

General description	
<p>The ThermoVision LabVIEW Toolkit is a set of VIs (virtual instruments) for cameras that support alarms, measurement functions, and I/O functionality.</p> <p>Through LabVIEW, you can use these VIs as sub-VIs to manage communications with a FLIR IR camera in digital mode.</p> <p>You can also generate true temperature images from images acquired through LabVIEW, and can use the LabVIEW IR Measurement and Display tools to analyze the temperatures of imaged objects.</p>	
Key features:	
<ul style="list-style-type: none"> <li>Set up communications between LabVIEW VI and a FLIR IR camera</li> <li>Capture and collect images via FireWire or Ethernet interfaces</li> <li>Adjust the camera configuration parameters and focus as you view a live image</li> <li>Control the camera calibration</li> <li>Send any other camera command to the camera</li> <li>Generate a true temperature image from a 16-bit image acquired using the camera's FireWire or Ethernet interfaces</li> <li>Close communications to the IR camera</li> </ul>	
<p>Users with licenses for the previous version can download a free upgrade via the following link:  <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63</a></p>	
Note: Only supports National Instrument 32-bit Labview	
Release notes	
Version	3.3
New features	<ul style="list-style-type: none"> <li>Windows 7 32- and 64-bit support</li> <li>Support for FLIR A615 and FLIR SC6X5 (including windowing)</li> <li>Support for windowing in FLIR SC660</li> <li>Various bug fixes</li> <li>New example VIs</li> </ul>

**General description**

Software to manage and control FLIR Systems thermal imaging cameras for security and safety applications

FLIR Sensors Manager offers powerful and efficient management capabilities for any security installation with FLIR Systems thermal imaging cameras. FLIR Sensors Manager allows to automatically locate FLIR Systems thermal imaging cameras in the network and to easily control them. Just connect the thermal imaging camera to the network, install FLIR Sensors Manager and hit the "discover" button and you will be able to manage and control the camera. Thanks to FLIR Sensors Manager, the management of FLIR Systems thermal imaging cameras over a network will become extremely easy.

FLIR Sensors Manager does not only allow controlling F-, PT- and D-Series thermal imaging cameras. It is also suited for managing thermal imaging cameras with temperature capabilities like the FLIR A310 f and FLIR A310 pt.

FLIR Sensors Manager allows you to get the most out of your thermal imaging camera with temperature measurement capability. It is ideal for monitoring critical infrastructure and for preventing fires.

FLIR Sensors Manager allows to automatically locate FLIR A310 pt and FLIR A310 f cameras in the network. They can be easily controlled and set-up in a distributed multi-camera environment

FLIR Sensors Manager is available in two different versions: Basic (freeware) and Pro. Depending on your exact needs and your security network, you can choose the version that best fits your system's requirements. A free demo version is available and can be downloaded from our website. After registration, the demo version is converted to the basic version.

The Basic version of FLIR Sensors Manager (freeware) allows to:

- Discover sensors in the network
- Command and control of up to four networked sensors: focus, pan/tilt, zoom
- Display network video
- Define presets
- Manage scan lists
- Create panoramas
- Configure user profiles(toolbars, layout, etc)
- Show thermal images on multiple monitors
- Capture images
- Geo Mapping

General description	
The Pro version of FLIR Sensors Manager contains all the features that are incorporated in the Basic version, plus a number of useful modes that will help you make the most out of your security network.	
<p>Video analytics</p> <p>Allows to perform video analytics within FLIR Sensors Manager. It includes:</p> <ul style="list-style-type: none"> <li>- Video Motion Detection: FLIR's pro proprietary algorithm will work on thermal or visible video in the most harsh environments.</li> <li>- Target detection with alarms based on spatial rules like trip wires crossing or areas triggered by enter, exit or both events.</li> <li>- Software based video-tracking of moving objects for control of PTZ sensors.</li> </ul> <p>Radar Cueing and radar tracks display</p> <p>Allows display of real-time position and classification information of radar targets (ID, course, speed, lat/lon, classification, ...) coming from Nexus enabled radars. Allows users to command cameras in advanced radar slave modes (ARPA tracking).</p> <p>Video wall display</p> <p>Allows fully configurable video mosaic layouts, supporting both network and analog frame grabber sources. E-stab Provides a steady image. Can be extremely useful when cameras are installed on high poles where they can be affected by wind or vibration.</p>	
Download

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

- Customized

### Course information

Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Advanced users who wish to receive an in-depth guidance to complex problems related to infrared equipment, applications, and measurement questions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Industry technical personnel</li> <li>• Researchers</li> <li>• Scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics

### General description

An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

This partnumber is reserved for adding additional students to an on site class.

### Content

- An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.

### Labs

- Portable classroom labs
- Field training on the site in agreement with the customer

### Course information

Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>

### Course details

Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.	
Content	
<ul style="list-style-type: none"> <li>An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Course details	
Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.
Exam	Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>Practical user</li> <li>This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having already some basic experience with IR thermography,</li> <li>knowing the basic functions of the camera,</li> <li>who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Be familiar with the basic operation of an infrared camera</li> <li>Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>Practical user</li> <li>This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having already some basic experience with IR thermography,</li> <li>knowing the basic functions of the camera,</li> <li>who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Be familiar with the basic operation of an infrared camera</li> <li>Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

### General description

This 2-day course consists of lectures on theoretical subjects, plus hands-on.

After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer (includes estimation of  $T_{\text{Refl}}$  and the emissivity) (with practice)
- Thermography equipment
- Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR

### Labs

- Measurements and software exercises

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-EXP-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

**P/N: ITC-EXP-2036**

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

This partnumber is reserved for adding additional students to a fever screening on site class.

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by qualified ITC instructor</li> <li>• Training material in printed format</li> <li>• Diploma of attendance</li> <li>• Might include more, such as refreshments or lunch, depending on location and organizing entity</li> </ul>
Course organization	
ITC	The "ITC Short Course Introduction to Thermography" is offered worldwide by ITC and partners. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The "ITC Short Course Introduction to Thermography" is lectured by qualified ITC instructors with long time experience in the various fields of thermography.

### General description

These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.

#### Content

- System requirements
- Configuration
- Analyzing functions
- Templates
- Reporting functions
- Data exchange

#### Labs

- System set up
- Data import
- Data analysis
- Creating templates
- Creating reports
- Exporting data
- Triggering

### Course information

Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Consultants interested in reporting</li> <li>• Building inspectors with reporting needs</li> <li>• R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> </ul>

### Course details

Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

**General description**

Software to manage and control FLIR Systems thermal imaging cameras for security and safety applications

FLIR Sensors Manager offers powerful and efficient management capabilities for any security installation with FLIR Systems thermal imaging cameras. FLIR Sensors Manager allows to automatically locate FLIR Systems thermal imaging cameras in the network and to easily control them. Just connect the thermal imaging camera to the network, install FLIR Sensors Manager and hit the "discover" button and you will be able to manage and control the camera. Thanks to FLIR Sensors Manager, the management of FLIR Systems thermal imaging cameras over a network will become extremely easy.

FLIR Sensors Manager does not only allow controlling F-, PT- and D-Series thermal imaging cameras. It is also suited for managing thermal imaging cameras with temperature capabilities like the FLIR A310 f and FLIR A310 pt.

FLIR Sensors Manager allows you to get the most out of your thermal imaging camera with temperature measurement capability. It is ideal for monitoring critical infrastructure and for preventing fires.

FLIR Sensors Manager allows to automatically locate FLIR A310 pt and FLIR A310 f cameras in the network. They can be easily controlled and set-up in a distributed multi-camera environment

FLIR Sensors Manager is available in two different versions: Basic (freeware) and Pro. Depending on your exact needs and your security network, you can choose the version that best fits your system's requirements. A free demo version is available and can be downloaded from our website. After registration, the demo version is converted to the basic version.

The Basic version of FLIR Sensors Manager (freeware) allows to:

- Discover sensors in the network
- Command and control of up to four networked sensors: focus, pan/tilt, zoom
- Display network video
- Define presets
- Manage scan lists
- Create panoramas
- Configure user profiles(toolbars, layout, etc)
- Show thermal images on multiple monitors
- Capture images
- Geo Mapping

General description	
The Pro version of FLIR Sensors Manager contains all the features that are incorporated in the Basic version, plus a number of useful modes that will help you make the most out of your security network.	
<p>Video analytics</p> <p>Allows to perform video analytics within FLIR Sensors Manager. It includes:</p> <ul style="list-style-type: none"> <li>- Video Motion Detection: FLIR's pro proprietary algorithm will work on thermal or visible video in the most harsh environments.</li> <li>- Target detection with alarms based on spatial rules like trip wires crossing or areas triggered by enter, exit or both events.</li> <li>- Software based video-tracking of moving objects for control of PTZ sensors.</li> </ul> <p>Radar Cueing and radar tracks display</p> <p>Allows display of real-time position and classification information of radar targets (ID, course, speed, lat/lon, classification, ...) coming from Nexus enabled radars. Allows users to command cameras in advanced radar slave modes (ARPA tracking).</p> <p>Video wall display</p> <p>Allows fully configurable video mosaic layouts, supporting both network and analog frame grabber sources. E-stab Provides a steady image. Can be extremely useful when cameras are installed on high poles where they can be affected by wind or vibration.</p>

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.	
This partnumber is reserved for adding additional students to an on site class.	
Content	
<ul style="list-style-type: none"> <li>An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>

Course details	
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 10 persons</li> </ul>
Note	Course fee does not include cost for instructor's travelling or lodging. When organized at the customers' site, the customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.
Course organization	
ITC	ITC In-house courses are offered worldwide by ITC and partners as listed. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	ITC In-house courses are lectured by ITC qualified instructors with experience in the relevant fields of application.

**Compatible with the following products**

- 55903-0922; FLIR T600 15° (incl. Wi-Fi)
- 55903-1022; FLIR T600 25° (incl. Wi-Fi)
- 55903-1522; FLIR T600 45° (incl. Wi-Fi)

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

**P/N: ITC-CER-5205**

© 2015, FLIR Systems, Inc.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

### General description

This 2-day course consists of lectures on theoretical subjects, plus hands-on.

After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer (includes estimation of  $T_{\text{Refl}}$  and the emissivity) (with practice)
- Thermography equipment
- Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR

### Labs

- Measurements and software exercises

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-EXP-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

**P/N: ITC-EXP-2036**

© 2015, FLIR Systems, Inc.

#ITC-EXP-2036; r. 23306; en-US

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

This partnumber is reserved for adding additional students to a fever screening on site class.

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.

#### Content

- System requirements
- Configuration
- Analyzing functions
- Templates
- Reporting functions
- Data exchange

#### Labs

- System set up
- Data import
- Data analysis
- Creating templates
- Creating reports
- Exporting data
- Triggering

### Course information

Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Consultants interested in reporting</li> <li>• Building inspectors with reporting needs</li> <li>• R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> </ul>

### Course details

Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

General description	
The 15° lens is a popular lens accessory and provides 1.7× magnification compared to the standard lens. Ideal for small or distant targets such as overhead power lines.	
Imaging and optical data	
Field of view (FOV)	15° × 11° (19° diagonally)
Minimum focus distance	500 mm (19.69 in.)
Focal length	41.3 mm (1.63 in.)
Spatial resolution (IFOV)	0.41 mrad
Lens identification	Automatic
F-number	1.0
Number of lenses	3 (3 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	3%
Physical data	
Weight	0.190 kg (0.419 lb.)
Size (L × D)	47 × 67 mm (1.85 × 2.64 in.)
Front lens diameter	52 mm (2.05 in.)
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>• Lens</li> <li>• Lens case</li> <li>• Front lens cap</li> <li>• Rear lens cap</li> </ul>
Packaging, weight	0.427 kg (0.95 lb.)

General description	
The standard 25° lens is suitable for the majority of applications.	
Imaging and optical data	
Field of view (FOV)	25° × 19° (31° diagonally)
Minimum focus distance	250 mm (9.84 in.)
Focal length	24.6 mm (0.97 in.)
Spatial resolution (IFOV)	0.69 mrad
Lens identification	Automatic
F-number	1.0
Number of lenses	3 (3 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	3%
Physical data	
Weight	0.160 kg (0.353 lb.)
Size (L × D)	41 × 67 mm (1.61 × 2.64 in.)
Front lens diameter	32 mm (1.26 in.)
Shipping information	
Packaging, type	Cardboard box

General description	
This wide angle lens has a field of view almost double that of the standard 25° lens. Perfect for wide or tall targets or when working in confined areas.	
Imaging and optical data	
Field of view (FOV)	45° × 34° (55° diagonally)
Minimum focus distance	150 mm (5.91 in.)
Focal length	13.1 mm (0.52 in.)
Spatial resolution (IFOV)	1.30 mrad
Lens identification	Automatic
F-number	1.0
Number of lenses	3 (3 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	3%
Physical data	
Weight	0.209 kg (0.461 lb.)
Size (L × D)	50 × 67 mm (1.97 × 2.64 in.)
Front lens diameter	30 mm (1.18 in.)
Shipping information	
Packaging, type	Cardboard box

General description	
For R&D usage or development purposes. As an example looking at PCB's or small electronic components.	
Imaging and optical data	
Field of view (FOV)	32 × 24 mm (40 mm diagonally)
Magnifying factor	2.9×
Working distance	84 mm
Depth of field	0.65 mm
Focal length	78 mm
Spatial resolution (IFOV)	50 μm
Lens identification	Manual
F-number	1.0
Number of lenses	2 (2 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	3%
Lens note	The close-up lens is mounted on the 25° lens
Physical data	
Weight	0.197 kg (0.43 lb.)
Size (L × D)	32 × 67 mm
Front lens diameter	53 mm

General description	
For R&D usage or development purposes. As an example looking at PCB's or small electronic components.	
Imaging and optical data	
Field of view (FOV)	64 × 48 mm (80 mm diagonally)
Magnifying factor	5.8×
Working distance	172 mm
Depth of field	2.8 mm
Focal length	149 mm
Spatial resolution (IFOV)	100 μm
Lens identification	Manual
F-number	1.0
Number of lenses	2 (2 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	3%
Lens note	The close-up lens is mounted on the 25° lens
Physical data	
Weight	0.176 kg (0.39 lb.)
Size (L × D)	28 × 67 mm
Front lens diameter	53 mm
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>• Lens</li> <li>• Front lens cap</li> <li>• Rear lens cap</li> <li>• Case</li> <li>• Instruction for mounting close-up lenses</li> </ul>
Packaging, weight	0.426 kg (0.84 lb.)
Packaging, size	172 × 131 × 133 mm (6.8 × 5.2 × 5.2 in.)
EAN-13	84518805757
UPC-12	73325585545
Country of origin	Sweden

General description	
This wide angle lens has a field of view approximately three times that of the standard 25° lens. This lens is suitable for extremely cramped situations where the operator can not step farther back from the object.	
Imaging and optical data	
Field of view (FOV)	80° × 64.4° ( 92.8° diagonal)
Minimum focus distance	65 mm (2.6 in.)
Focal length	6.5 mm (0.26 in.)
Spatial resolution (IFOV)	2.62 mrad
Lens identification	Automatic
F-number	1.0
Number of lenses	5 (5 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	5%
Physical data	
Weight	0.428 kg (0.944 lb.)
Size (L × D)	126 × 67 mm (4.96 × 2.64 in.)
Front lens diameter	25 mm 0.98 in.)

General description	
The 7° lens is a popular accessory and provides 3.6× magnification compared to the standard lens. Ideal for small or distant targets such as overhead power lines.	
Imaging and optical data	
Field of view (FOV)	7° × 5.3° (8.7° diagonally)
Minimum focus distance	2.0 m (6.6 ft.)
Focal length	88.9 mm (3.5 in.)
Spatial resolution (IFOV)	0.19 mrad
Lens identification	Automatic
F-number	1.3
Number of lenses	3 (3 asph)
MTF @ 70% of FOV	Normal requirements (52%)
Distortion	3%
Physical data	
Weight	0.88 kg (1.94 lb.)
Weight, lens	0.71 kg (1.57 lb.)
Size (L × D)	96 × 126 mm (3.78 × 4.96 in.), excluding support
Front lens diameter	96 mm (3.78 in.)
Shipping information	
Packaging, type	Cardboard box

### General description

The filter holder makes it possible to use filters with FLIR A6xx and FLIR A6xx sc series cameras. A filter is glued into the filter holder, and the filter holder is then mounted on the lens by screwing the holder onto the rear of the lens.

Dimensions for filter:

Diameter: 25.4 mm +0.1/-0.15 mm (1 in. +0.004/-0.006 in.).

Maximum thickness: 1.0 mm (0.04 in.).

Minimum free filter area diameter: 24 mm (0.94 in.)

NOTE: Filter is not included.

### Shipping information

Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>Filter holder</li> <li>Plastic bag</li> <li>Printed instruction</li> </ul>
Packaging, weight	0.059 kg (0.13 lb.)
Packaging, size	202 x 146 x 25 mm (8 x 5.7 x 1 in.)
EAN-13	7332558007273

## General description

Compared to FLIR Tools, FLIR Tools+ has the following features:

- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting

FLIR Tools/Tools+ is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

FLIR Tools+ main features:

- Manual IR/Visual Image Grouping
- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting - Microsoft Office 2007 (32bit), and 2010 (32bit) support
- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

General description	
ThermoVision™ System Developers Kit	
Key features:	
<ul style="list-style-type: none"> <li>• Supports communication and broadcasting via FireWire™, Ethernet, and USB interfaces.</li> <li>• Gives the user full control of the camera.</li> <li>• Allows the user to set alarm conditions and measurement functions in the camera</li> <li>• Allows the user to define I/O functionality (FLIR A series).</li> <li>• Based on ActiveX technology.</li> <li>• Supports acquisition of images through FireWire™, Ethernet, and USB interfaces.</li> <li>• Reads from and writes to file in FLIR Systems' proprietary file format and writes to files in FLIR Systems' open floating point format (*.fpf).</li> <li>• Converts 16-bit absolute pixels into temperature pixels and several intermediate types of pixels formats, for maximum user flexibility. Applies to all camera models with temperature measurement capabilities.</li> <li>• Allows 16-bit temperature linear outputs from FLIR A series cameras.</li> <li>• Includes method that allows using individual emissivity value correction on any single pixel or condensed measuring value – e.g. average, minimum etc.</li> <li>• Supports conditional recording to file through FireWire™, Ethernet, and USB interfaces.</li> </ul>	
Users with licenses for the previous version can download a free upgrade via the following link: <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=62">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=62</a>	
Release notes	
Version	ThermoVision 2.6 SP2
New features	<ul style="list-style-type: none"> <li>• — News in SP2:</li> <li>• Support for FLIR GF3XX series</li> <li>• Support for windowing in FLIR A615 and FLIR SC6x5</li> <li>• Support for windowing in FLIR SC6x0</li> <li>• Various bug fixes</li> </ul>
Shipping information	
Packaging, type	Cardboard box
Packaging, weight	0.132 kg (0.3 lb.)
Packaging, size	202 × 146 × 25 mm (8.0 × 5.7 × 1.0 in.)

General description	
<p>The ThermoVision LabVIEW Toolkit is a set of VIs (virtual instruments) for cameras that support alarms, measurement functions, and I/O functionality.</p> <p>Through LabVIEW, you can use these VIs as sub-VIs to manage communications with a FLIR IR camera in digital mode.</p> <p>You can also generate true temperature images from images acquired through LabVIEW, and can use the LabVIEW IR Measurement and Display tools to analyze the temperatures of imaged objects.</p>	
Key features:	
<ul style="list-style-type: none"> <li>Set up communications between LabVIEW VI and a FLIR IR camera</li> <li>Capture and collect images via FireWire or Ethernet interfaces</li> <li>Adjust the camera configuration parameters and focus as you view a live image</li> <li>Control the camera calibration</li> <li>Send any other camera command to the camera</li> <li>Generate a true temperature image from a 16-bit image acquired using the camera's FireWire or Ethernet interfaces</li> <li>Close communications to the IR camera</li> </ul>	
<p>Users with licenses for the previous version can download a free upgrade via the following link:  <a href="http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63">http://support.flir.com/SwDownload/app/RssSWDownload.aspx?ID=63</a></p>	
Note: Only supports National Instrument 32-bit Labview	
Release notes	
Version	3.3
New features	<ul style="list-style-type: none"> <li>Windows 7 32- and 64-bit support</li> <li>Support for FLIR A615 and FLIR SC6X5 (including windowing)</li> <li>Support for windowing in FLIR SC660</li> <li>Various bug fixes</li> <li>New example VIs</li> </ul>

## General description

The Extended Warranty Package covers parts and labour for your IR camera, consumables not included. FLIR Systems warrants its products to be free from defects caused by faulty material or poor workmanship, for a period specified above. **NO PRODUCT IS WARRANTED TO BE MERCHANTABLE OR FIT FOR ANY PARTICULAR USE OR APPLICATION.** The warranty is void if the buyer damages the item due to misuse, abuse, modification, processing, or integration with other items. FLIR Systems' maximum liability under this warranty is limited to the obligation to replace or, at its sole option, to credit Buyer's account up to the purchase price.

### General description

General Maintenance package offers a complete 14 points inspection and calibration service (for one lens combination). Shipping cost not included.

#### 14-point inspection program:

- Perform a complete operational check.
- Fusion calibration and laser alignment, when applicable.
- Verify all internal cable and PCB connections.
- Clean the viewfinder and check the optics.
- Upgrade the internal camera software to the latest revisions.
- Perform minor repairs.
- Verify and/or re-equalize as needed each temperature range for image uniformity.
- Verify standard lens calibration (optional: other or specially engineered lenses).
- Verify ambient temperature compensation as needed.
- Recalibration to ensure factory specifications are met.
- Calibrate temperature ranges up to +1500°C, when applicable.
- Perform a quality-approved acceptance test procedure.
- Provide a calibration label with the next due date.
- Provide a calibration certificate (optional: extended calibration certificate with measured values).

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. Additional days can be booked (ITC-ADV-3006). After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

Course information	
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-ADV-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Might include more, such as lunch or refreshments, depending on location and the organizing entity</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. For open classes, please contact your closest ITC, ITC partner or FLIR sales representative.
Course organization	
ITC	The course "ITC Advanced Thermal Measurements (R&D)" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC Advanced Thermal Measurements (R&D)" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

An additional day can be booked when the customer wants to extend the training content, software exercises or guided field practice.

The third day can be added to the following courses:

ITC-ADV-3046

### Content

- Customized, build on the topics of the course prior to the additional day

### Labs

- Customized, depending on the equipment used and the application of interest

### Course information

Available languages	English, other languages upon demand
Target group	<ul style="list-style-type: none"> <li>• Participants of advanced courses that are delivered on-site</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Persons with special interests in the equipment and their application requesting in-depth training or additional guidance.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites of the course prior to the additional day</li> </ul>

### Course details

Duration	1 day
Structure	Customized upon the customer's request
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>• ITC qualified instructor teaching the class</li> <li>• Training material in printed format</li> <li>• Diploma of attendance</li> <li>• Attendance of a group up to 6 persons</li> <li>• Might include more, such as lunch, refreshments, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>

General description	
This is a special day emphasizing on specifications of equipment towards the particularities of applications (for instance triggering or high speed). It addresses mainly the needs of high-end camera users in the scientific or industrial fields.	
Content	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Customized</li> </ul>	
Course information	
Available languages	English, French, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Highly specialized users with advanced and scientific applications as well as persons interested in these applications and related infrared equipment.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Researchers</li> <li>Scientists</li> <li>University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	Typically 1 day
Structure	Theory and hands-on, depending on topics
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training material</li> <li>Diploma of attendance</li> </ul>
Note	This course is typically organized at the customer's site. Course fee does not include cost for instructor's travelling or lodging. The customer is responsible for providing a suitable classroom and preferably also refreshments/lunch.

### General description

Consultancy can be described as any action or arrangement that is not strictly a training course. Most likely, a thermal camera will be involved. It can be, but is not restricted to:

- Pre-sales equipment or software demonstration over the normal extend
- Equipment and software demonstration and explanation over the normal extend
- Advanced technical support
- Application support
- Comparative study involving a camera, either alone or in conjunction with other instruments
- General measurements in a difficult or unusual situation

### Content

- Customized

### Labs

### General description

The core part (2 days) consists of lectures on theoretical subjects, plus hands-on. After a general review of heat and heat transfer, the participants will learn about radiative heat transfer. Starting with the standard measurement situation they will learn about the importance of emissivity and reflected apparent temperature. The participants will compute and estimate emissivity and do compensation for the reflected apparent temperature. They will also learn about calibration and Hypercal. Depending on the needs of the audience and the time available, additional topics to be covered can be measurement through windows, measurable figures of merit, signal generation, the influence of integration time, ROIC, etc., triggering and synchronization, and NUC and Bad Pixel Replacement.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer
- What does a camera see? Definition of a standard measurement situation
- Computing the emissivity. Estimating emissivity and T<sub>Refl</sub> (with practice)
- From radiation to signal
- Measurable figure of merits (with practice)
- Triggering and synchronization (additional content, upon request, with practice)
- Measuring through a window (additional content, upon request, with practice)
- Calibration (additional content, upon request, with practice)
- Spectral filters (additional content, upon request, with practice)
- NUC and Bad Pixels replacement (additional content, upon request, with practice)
- Transient, Lock-in and Pulse, basics of NDT (additional content, upon request)

### Labs

- Practice according to content listed above

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR cooled thermal cameras and systems (cameras connected to a PC with e.g. the software programs Altair, AltairLI or Thesa).</li> <li>• Users of un-cooled thermal cameras with interest in advanced thermal measurement applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> <li>• Persons working with NDT</li> </ul>

Course information	
Pre-requisites	<ul style="list-style-type: none"> <li>None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> <li>Experience in measurement techniques and general software skills.</li> </ul>
Course details	
Duration	<p>Standard: 2 days</p> <p>Upon request: Additional day including complementary topics</p> <p>Upon request: 1 day only (for experienced users with sufficient theoretical background)</p>
Structure	Theory and hands-on
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 4 persons</li> <li>Might include more, such as lunch, refreshments, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Note	<p>This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.</p>
Course organization	
ITC	<p>The course "ITC In-house R&amp;D training ATS products" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC, ITC partner or FLIR sales representative.</p>
ITC Trainers and Licensed Trainers	<p>The course "ITC In-house R&amp;D training ATS products" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.</p>

### General description

An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

This partnumber is reserved for adding additional students to an on site class.

### Content

- An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.

### Labs

- Portable classroom labs
- Field training on the site in agreement with the customer

### Course information

Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>

### Course details

Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.

Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Course details	
Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.
Exam	Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

**P/N: ITC-CER-5205**

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

### General description

This 2-day course consists of lectures on theoretical subjects, plus hands-on.

After a general review of heat and heat transfer, the participants will learn about radiative heat transfer, and thermography equipment. Intensive practice is performed on software.

### Content

- Introduction
- Review on thermal transfer
- Radiative heat transfer (includes estimation of  $T_{\text{Refl}}$  and the emissivity) (with practice)
- Thermography equipment
- Software e.g. ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR

### Labs

- Measurements and software exercises

### Course information

Available languages	English, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Users of FLIR uncooled thermal cameras working with software programs as ThermoCAM Researcher, FLIR Quickplot or FLIR ResearchIR</li> <li>• and with infrared applications in the industry or at research institutions.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Laboratory and industry technical personnel</li> <li>• Researchers and scientists</li> <li>• University students</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> <li>• Experience in measurement techniques and general software skills.</li> </ul>

### Course details

Duration	Standard: 2 days (in succession or separate) Upon request: Additional day including complementary topics (ITC-EXP-3006) Upon request: 1 day only (for experienced users with sufficient theoretical background)
Structure	Theory and hands-on

**P/N: ITC-EXP-2036**

© 2015, FLIR Systems, Inc.

Course details	
Exam	None
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by qualified ITC instructor</li> <li>Training and/or reference material in printed format</li> <li>Diploma of attendance</li> <li>Attendance of a group up to 6 persons</li> </ul>
Note	This is normally an on-site course organized at a customer's facility. The fee does not include costs for instructor's travelling or lodging. The customer is responsible for providing access to the equipment or objects that should be analyzed or measured, a suitable meeting room, and preferably also refreshments/lunch.
Course organization	
ITC	The course "ITC R&D basics for industry users" is offered by ITC direct operations in EMEA. Specific customer requests shall be forwarded to the closest ITC or ITC partner or FLIR sales representative.
ITC Trainers and Licensed Trainers	The course "ITC R&D basics for industry users" is delivered by ITC qualified instructors having the relevant expertise in advanced thermal measurement, infrared applications, and the use of the camera equipment including software programs.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

This partnumber is reserved for adding additional students to a fever screening on site class.

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This full 2-day course aims at explaining how to set-up a procedure for the temperature control of population. It is designed for persons who might have to implement a control (medical authorities, customs, civil security, etc). It starts with a brief, but necessary, reminder of thermal transfers and of the fundamentals of thermography. Key factors such as NETD, drift and drift compensation, baseline measurement and update, and the factors influencing the diagnosis are explained in details. Camera setup is included. ITC recommends organizing it simultaneously to a real-size test (airport, ferry-port, seaport, river port, stadium, etc.).

### Content

- Introduction
- Human physiological factors
- Basic thermography
- IR Camera basics
- Fever screening methodology

### Labs

- Emissivity and Trefl
- Camera settings
- Influence of the object size on the measurement

### Course information

Available languages	English
Target group	<ul style="list-style-type: none"> <li>• Persons with professional interest in human febrile temperature screening.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Airline operative personnel</li> <li>• Reception personnel</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic technical understanding</li> <li>• Should be organized with a real-size test in the field</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos in the morning and practical labs alternate.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

General description	
These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.	
Content	
<ul style="list-style-type: none"> <li>• System requirements</li> <li>• Configuration</li> <li>• Analyzing functions</li> <li>• Templates</li> <li>• Reporting functions</li> <li>• Data exchange</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>• System set up</li> <li>• Data import</li> <li>• Data analysis</li> <li>• Creating templates</li> <li>• Creating reports</li> <li>• Exporting data</li> <li>• Triggering</li> </ul>	
Course information	
Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>• Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Consultants interested in reporting</li> <li>• Building inspectors with reporting needs</li> <li>• R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge about thermography and related parameters.</li> </ul>
Course details	
Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

Part number	TA55
Part description	AC Current Line Splitter
<ul style="list-style-type: none"> <li>Provides easy and safe measurements of current and voltage from two or three wire outlets.</li> <li>Plugging the power connector into the line splitter separates the hot/live conductor from the neutral (and ground) for accurate current measurement.</li> <li>Dual ranges (x1 and x10) for higher resolution on low-amperage readings.</li> <li>Built-in recessed voltage testing inputs.</li> <li>2 year warranty.</li> </ul>	
<b>Specifications</b>	
Voltage	120 V $\pm$ 10%
Current	15 A AC maximum
Temperature	Operating: 5–40°C (41–104°F); storage: –20 to 60°C (–4 to 140°F)
Humidity	Operating: max. 80% up to 31°C (87°F) decreasing linearly to 50% at 40°C (104°F); storage <80%
Altitude	2000 m (7000') max.
<b>Meter data</b>	
Suitable main unit	CM78, CM83 (CM82, CM85)
Warranty	2 years
<b>Certifications</b>	
Certifications	UL, CUL, CAT II—600 V
Safety	For indoor use and in accordance with the requirements for double insulation to IEC 1010-1 (1995): EN 61010-1 (1995), Overvoltage Category II, Pollution Degree 2
<b>Meter physical data</b>	
Weight:	0.102 kg
Dimensions (H x W x L)	2.2 cm x 6.03 cm x 16.2 cm
Material	PC-ABS
Color	Black

Part number	MR05
Part description	Impact Pin Moisture Probe
<p>The FLIR MR05 upgrades your FLIR moisture meter to help you easily test for moisture in challenging spots—on rough or uneven surfaces, in corners, in hard woods or high-density materials, and even, with ease, in areas without a dry reference. Made with extra-durable pins and a metallic impact plate that can withstand hammering to drive pins into the hardest materials, the FLIR MR05 lets you tackle the toughest moisture-measurement challenges all day long. Key features include six additional sets of thick and thin pins, an external pin accessory for the FLIR moisture meter mount for extended reach, a 1/4"-20 integrated wrench on the cap to replace pins, a durable BNC connector, a 2 m coiled cord, and a 2 year warranty.</p>	
<b>Meter data</b>	
Suitable main unit	MR77 (MR160 and MR176 coming soon)
Cable length	2.45 m (8') uncoiled
Pin length	10 mm (0.4")
Warranty	2 years (with registration)
<b>Meter physical data</b>	
Weight	195 g (0.43 lb)
Dimensions (H x W x L)	8.4 cm x 7.1 cm x 3.8 cm (3.3" x 2.8" x 1.5")

Part number	TA60
Part description	Thermocouple Probe with Adapter
<ul style="list-style-type: none"> <li>Type K thermocouple temperature sensor.</li> <li>Can be used to measure temperature with many meters.</li> <li>Fast responding with a wide general-purpose measurement range.</li> <li>Safety-shrouded banana to banana connection.</li> <li>2 year warranty</li> </ul>	
<b>Specifications</b>	
Temperature range	-40 to 1200°C (-40 to 2192°F)
<b>Meter data</b>	
Suitable main unit	DM93, CM78 (DM92)
Warranty	2 years
<b>Certifications</b>	
Certifications	ITS-90 (JIS C-1602-1995 Class 2)
<b>Meter physical data</b>	
Weight	0.06 kg
Dimensions (H x W x L)	15.24 cm x 3.81 cm x 1.27 cm
Material	ABS plus PC, bronze (nickel plated), PVC
Color	Black and yellow

Part No.	VSC2-58-1FM
<b>General information</b>	
Short description	Two-channel camera, 5.8 mm diameter with 1 m probe
Compatible main unit	VS70
Integrated handset	No
Wireless capabilities	N/A
Compatible wireless handset	With optional VST (cannot switch cameras with VST)
Compatible detachable cameras	N/A
Warranty	2 years
<b>Camera specifications</b>	
Articulation	No
Diameter	5.8 mm
Front camera focal length	20–60 mm
Front camera field of view	56°
Front camera resolution	QVGA (320 × 240) pixels
Side camera focal length	20–60 mm
Side camera field of view	56°
Side camera resolution	QVGA (320 × 240) pixels
Probe length	1 m
Video format	NTSC
Brightness control	Manual with variable options
Lamp type	LED
<b>Power system</b>	
Power requirements	N/A
<b>Environmental data</b>	
Operating temperature	–10 to 50°C (14–122°F)
Operating humidity	80% maximum
Storage temperature	–40 to 80°C (–40 to 176°F)
<b>Physical data</b>	
Weight	See shipping information
Dimensions (H × W × L)	See shipping information
Material	PC-ABS, rubber hand grip, nylon strap
Color	Gray, black

Part number	VSA4-1M-W
The new FLIR wireless four-way articulation videoscope cameras for the VS70 allows for inspection of tight, remote, and off-center targets. Use both articulation knobs to control movement of the camera up, down, left, and right to get a complete video or picture for your inspection. These cameras come with an integrated handset that contains power and brightness adjustment buttons. Set your display down or let it hang from the neck strap while you focus on your probe orientation without worrying about cords. Also included are the handy camera tip accessories that allow viewing at a 45° angle (mirror), retrieving a metallic object (magnet), and reduce the likelihood of getting stuck (anti-snag ball).	
<b>General information</b>	
Compatible main unit	VS70
Integrated handset	Yes
Wireless capabilities	2.4 GHz to main unit
Wireless maximum range	30 m
Compatible wireless handset	N/A
Compatible detachable cameras	N/A
Warranty	2 years
<b>Camera specifications</b>	
Articulation	240 ± 20° manual tip articulation
Diameter	8 mm
Resolution	VGA ( 640 × 480 pixels)
Probe length	1 m
Focal length	25–60 mm
Field of view	60°
Imaging sensor	CMOS
Video format	NTSC
Brightness control	Manual with 10 level options
Lamp type	LED
Adjustable articulation tension	Yes, via manual knob
<b>Power system</b>	
Power requirements	Integrated rechargeable battery
Run time	2 hours continuous use

Part number	VSA4-1-W
Part description	<p>The new FLIR wireless four-way articulation videoscope cameras for the VS70 allows for inspection of tight, remote, and off-center targets. Use both articulation knobs to control movement of the camera up, down, left, and right to get a complete video or picture for your inspection. These cameras come with an integrated handset that contains power and brightness adjustment buttons. Set your display down or let it hang from the neck strap while you focus on your probe orientation without worrying about cords. Also included are the handy camera tip accessories that allow viewing at a 45° angle (mirror), retrieving a metallic object (magnet), and reduce the likelihood of getting stuck (anti-snag ball).</p>
<b>General information</b>	
Compatible main unit	VS70
Integrated handset	Yes
Wireless capabilities	2.4 GHz to main unit
Wireless maximum range	30 m
Compatible wireless handset	N/A
Compatible detachable cameras	N/A
Warranty	2 years
<b>Camera specifications</b>	
Articulation	240 ± 20° manual tip articulation
Diameter	8 mm
Resolution	VGA ( 640 × 480 pixels)
Probe length	1 m
Focal length	60 mm to infinity
Field of view	60°
Imaging sensor	CMOS
Video format	NTSC
Brightness control	Manual with variable options
Lamp type	LED
Adjustable articulation tension	Yes, via manual knob
<b>Power system</b>	
Power requirements	3.7 V rechargeable lithium polymer
Run time	2 hours continuous use

## Wireless four-way articulating camera, focal length 60 mm to infinity

General description	
This device is a viewport which consist of a crystal "glass" window, mounted in an aluminum frame. The glass is specially formulated to allow transmission of infrared light to allow use of infrared thermal sensing equipment without opening the enclosure. This device is intended for installation in doors or walls of electrical enclosures without compromising the integrity of the enclosure.	
Power system	
Voltage	Any range
Environmental data	
Environment	Indoor/outdoor type 4/12
Operating temperature range	Maximum: 260°C (500°F)
Storage temperature range	Optics, maximum: 1357°C (2474°F)
Physical data	
Size (L × W × H)	25.5 × 73 × 86 mm (1.0 × 2.87 × 3.36 in.)
Viewing aperture diameter	45 mm (1.77 in.)
Material	Optics: CaF <sub>2</sub> (Calcium Fluoride Crystal) Body: Anodized aluminum Hardware: steel
Comments to physical data	Required hole diameter, nominal: 60.3 mm (2.375 in.) Greenlee Punch: 76BB Maximum pullout strength: 658 kg (1450 lb.)
Lens	
Waveband	Broadband IR: short-, mid-, and longwave
Visible light spectrum	Yes
Certifications	
Certification	UL, IP67, NEMA Type 4/12, CSA
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>IR window</li> <li>Case</li> <li>Mounting instruction</li> <li>Additional safety screw</li> </ul>

General description	
High capacity battery for the IR camera.	
Power system	
Battery type	Rechargeable Li ion battery
Battery voltage	7.2 V
Battery capacity	4.4 Ah at +20°C (+68°F)
Battery note	Approximate lithium content: 3.0 g
Charging system	In camera (AC adapter or 12 V from a vehicle) or 2-bay charger
Charging time	2.5 h to 95% capacity, charging status indicated by LED's
Charging temperature	0°C to +45°C (+32°F to +113°F)
Environmental data	
Battery storage temperature range	-40°C to +70°C (-40°F to +158°F)
Physical data	
Battery weight	0.24 kg (0.52 lb.)
Size (L x W x H)	141 x 47 x 28 mm (5.5 x 1.8 x 1.1 in.)
Shipping information	
Packaging, type	Cardboard box
Packaging, weight	0.324 kg (0.7 lb.)
Packaging, size	183 x 136 x 63 mm (7.2 x 5.4 x 2.5 in.)
EAN-13	7332558004364
UPC-12	845188004347

### General description

FLIR Tools is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

#### Key features:

- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Manual IR/Visual Image Grouping
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

## General description

Compared to FLIR Tools, FLIR Tools+ has the following features:

- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting

FLIR Tools/Tools+ is a software suite specifically designed to provide an easy way to update your camera and create inspection reports.

FLIR Tools+ main features:

- Manual IR/Visual Image Grouping
- Radiometric Panorama incl. MSX
- Radiometric IR Video Recording
- Advanced Reporting - Microsoft Office 2007 (32bit), and 2010 (32bit) support
- Report templates (horizontal IR + DC, vertical IR + DC, horizontal IR + IR).
- Import images from your camera to your computer.
- Apply filters when searching for images.
- Search all text in images and text annotations.
- Store the five latest search criteria's.
- Lay out, move, and resize measurement tools on any infrared image.
- Create PDF imagesheets of any images of your choice.
- Add headers, footers, and logos to imagesheets.
- Create PDF reports for images of your choice.
- Add headers, footers, and logos to reports.
- Report editor (report page preview and snap to grid).
- Sort function (by date, groups sorted by path, and groups sorted by date).
- Browse and purchase infrared cameras, software, and accessories in the webshop.
- Software localized to 21 languages.
- Support for MSX (Multi-Spectral Dynamic Imaging ) Images
- Support for Sketch Images on both IR and Visual with toggling ON/OFF feature.
- Support for Same FOV ( Field of View Match )
- Display of Compass Information in Edit and in Report.
- Display of GPS Information in Edit and in Report.
- Microsoft Windows 7 (32- and 64-bit) and Windows 8 (32- and 64-bit)
- Camera update (applies to FLIR Ex, Kxx, Exx and T6xx series only).

### General description

FLIR IR Camera Player is a PC-based remote control and viewer that you can use with cameras from FLIR Systems.

You can perform one or more of the following with FLIR IR Camera Player:

- Record a video stream from the camera.
- Save a frame from the video stream as a snapshot image (\*.bmp).
- Autofocus, focus far, and focus near.
- Autoadjust the camera image.
- Freeze the camera image.
- Save a camera image in the camera.
- Change Color palette.
- Add an image description and a text comment to an image.

You connect a camera in one of the following ways:

- Ethernet
- FireWire
- USB

### General description

FLIR Tools Mobile is an intuitive Android app for analyzing, managing, and distributing infrared images.

#### Key features:

- Remote control
- MSX
- Images with sketch on DC and IR
- Images with field of view follow
- Editable text comments
- Emissivity table
- Import images from your Wi-Fi-enabled camera.
- Connect and stream infrared images from the camera.
- Connect and stream measurement data from FLIR Test & Measurement meters
- Lay out and move measurement tools on the image.
- Read out temperature measurements.
- Create and configure temporal plots based on results of measurement tools on the infrared image.
- Log measurement data and export it as a \*.csv file.
- Save a measurement scenario as a data snapshot.
- Zoom in on images.
- On the Android device, remotely take snapshots when a camera is connected.
- On the camera, take snapshots that will automatically be saved on the Android device.
- Delete images on the Android device.
- Display an image's GPS coordinates on Google Maps.
- Create and e-mail reports.
- Save images in the Android device photo library.
- Send images to FTP sites and other file-sharing services (Dropbox, Box.net, etc.).
- Display image information, e.g., object parameters, text comments, and file details.
- Play back voice comments.
- Change the level and span.
- Change general settings in the app.
- Change the palette.

### Download

The application can be downloaded from Android Market or Amazon Marketplace, see the link below.

### General description

FLIR Tools Mobile lets professional thermographers use an iPad, iPhone, or iPod touch to see and capture live, streaming infrared video and stills from select FLIR cameras.

With FLIR Tools Mobile the camera can be stationed in one area and operated wirelessly from another – highly useful for IR inspections of energized equipment or performing IR surveys in hard-to-reach locations and harsh working environments. Streaming video and remote access also gives decision makers and others on your team a valuable opportunity to observe and collaborate in the thermal imaging process.

Using FLIR Tools Mobile, you can do one or more of the following:

- Import images from your infrared camera
- Lay out and move measurement tools on the image
- Read out temperature measurements
- Zoom in on images
- On the iPhone/iPad, remotely take snapshots when a camera is connected
- On the camera, take snapshots that will automatically be saved in the iPhone/iPad
- Delete any images on the iPhone/iPad
- Display an image's GPS coordinates on Google Maps
- Create and e-mail imagesheets
- Create and e-mail reports
- Print imagesheets and reports to any AirPrint-enabled printer
- Save images to iPhone/iPad photo library
- Send images to FTP sites and other file sharing services (Dropbox, Box.net, etc.)
- Display image information, such as object parameters, text comments, file information, etc.
- Play-back voice comments
- Change level and span
- Change general settings in the app
- Change palette

**General description**

The Extended Warranty Package covers parts and labour for your IR camera, consumables not included.

FLIR Systems warrants its products to be free from defects caused by faulty material or poor workmanship, for a period specified above. **NO PRODUCT IS WARRANTED TO BE MERCHANTABLE OR FIT FOR ANY PARTICULAR USE OR APPLICATION.** The warranty is void if the buyer damages the item due to misuse, abuse, modification, processing, or integration with other items. FLIR Systems' maximum liability under this warranty is limited to the obligation to replace or, at its sole option, to credit Buyer's account up to the purchase price.

### General description

General Maintenance package offers a complete 14 points inspection and calibration service (for one lens combination). Shipping cost not included.

#### 14-point inspection program:

- Perform a complete operational check.
- Fusion calibration and laser alignment, when applicable.
- Verify all internal cable and PCB connections.
- Clean the viewfinder and check the optics.
- Upgrade the internal camera software to the latest revisions.
- Perform minor repairs.
- Verify and/or re-equalize as needed each temperature range for image uniformity.
- Verify standard lens calibration (optional: other or specially engineered lenses).
- Verify ambient temperature compensation as needed.
- Recalibration to ensure factory specifications are met.
- Calibrate temperature ranges up to +1500°C, when applicable.
- Perform a quality-approved acceptance test procedure.
- Provide a calibration label with the next due date.
- Provide a calibration certificate (optional: extended calibration certificate with measured values).

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

### General description

This interdisciplinary course bridges the gap between IR thermography, background science and application theory. Being an overview course it deals with three main application fields of thermography: electrical, industrial, and building. For every application the participant will learn about the specific theory, typical faults, and how to detect them with a thermography camera. The student will also learn about the basics of condition monitoring, and maintenance.

Examples and case studies from the real world illustrate the course content and are discussed with the participants. Participants will be trained in discovering and identifying typical faults by typical thermal patterns.

### Content

- Introduction
- Electrical Applications (current, voltage, resistance, electrical systems, Ohm's law, some important properties of materials, typical faults, surveying methodology and criteria, safety, voltage limits)
- Industrial Applications (bearings, pumps, gears, belts, misalignment and couplings, gaskets, seals, rings, glands, steam traps, furnaces)
- Building Applications (definition of the building envelope, steady state thermal transfer in a building envelope, transient thermal transfer in a building envelope, applications)

### Course information

Available languages	
English	
Target group	
<ul style="list-style-type: none"> <li>• Professional thermographers holding a Level 1 or a Level 2 certificate and</li> <li>• with interest in increasing their knowledge of different thermographic applications, and their limitations or</li> <li>• with a special interest in condition monitoring of machines</li> </ul>	
Typical student	
<ul style="list-style-type: none"> <li>• Knows how to operate the camera</li> <li>• Knows how to report</li> <li>• Works in the industry with e.g. maintenance and condition monitoring or is a consultant</li> </ul>	
Pre-requisites	
<ul style="list-style-type: none"> <li>• Valid Level 1 thermography certificate</li> <li>• IR related education and experience</li> </ul>

Course details	
Duration	3 days (24 hours)
Structure	The course is divided into the three parts: Electrical Applications, Industrial Applications, and Building Applications. Theory sessions and case studies including interactive discussions alternate.
Exam	A final exam (30 multiple choice questions) will be written on the 3d day in the afternoon. In connection, the correct answers will be discussed by the instructor and the participants.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>
Course organization	
ITC	The Advanced General Thermography Course is offered worldwide by ITC as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary.
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Advanced General Thermography Courses.

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.	
This partnumber is reserved for adding additional students to an on site class.	
Content	
<ul style="list-style-type: none"> <li>An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Course details	
Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.

General description	
An on-site training can be customized upon your needs. The participants will learn about IR thermography, inspections, measurements, applications, and reporting corresponding to the level needed for performing measurements and inspection in their working environment. The trainer will give useful advice on how to best implement IR thermography in your business.	
Content	
<ul style="list-style-type: none"> <li>An on-site course can be any course, from a 1-day introduction to general thermography, over a customized application course to a complete certification course.</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>Portable classroom labs</li> <li>Field training on the site in agreement with the customer</li> </ul>	
Course information	
Available languages	English, Dutch, German, French, Italian, Spanish, Swedish, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Employees of a company or certain departments who would like to minimize travel costs and receive the training directly on their daily working site.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.</li> </ul>
Course details	
Duration	Customized or according to the kind of course the in-house training is equivalent to.
Structure	Theory, camera handling, demos, practical labs and field training alternate.
Exam	Please refer to the pre-requisites and recommendations applicable to the kind of course the in-house training is equivalent to.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

This partnumber is reserved for adding additional students to a level 1 on site class.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of 1 person</li> <li>• Might include more, such as lunch, depending on location and organizing entity</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 1 certified thermographer. The participant will learn about the basics of infrared, how to operate the camera under different conditions and for various purposes, how to do an appropriate judgement of the measurement situation in the field and how to identify potential error sources. After the class, the participant will be able to do IR inspections following written guidelines and to report the result of this inspection.

### Content

- Introduction to Thermography
- Camera Operation
- Basic physics of heat
- Basic physics of infrared
- Thermal pattern recognition and IR applications
- IR temperature measurement techniques
- Qualitative and quantitative thermography
- Inspection routines and reporting

### Student presentations

During the seminar, students will generate a small case study based on the lab exercises to be presented to the class.

### Labs

- Camera handling
- Level and Span
- Conduction pattern
- Forced convection
- Direct and indirect thermal measurement
- Thermal capacity
- Steady state and transient heat flow
- Evaporation and condensation
- Electrical application
- Emissivity and Reflected apparent temperature
- Spatial resolution
- Location and temperature measurement of a hot/cold spot
- Image transfer to the computer

Course information	
Available languages	Chinese, Danish, Dutch, English, Finish, French, German, Greek, Hebrew, Italian, Japanese, Korean, Norwegian, Polish, Portuguese (bra.), Romanian, Russian, Serbo-Croatian, Spanish, Swedish, Thai
Target group	<ul style="list-style-type: none"> <li>• Practical user</li> <li>• This course is designed for beginners in thermography with some experience in camera handling and limited IR knowledge, who want to take their first step to become a professional thermographer and want to qualify as a Level 1 certified thermographer.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>• having already some basic experience with IR thermography,</li> <li>• knowing the basic functions of the camera,</li> <li>• who wants to become a certified thermographer in order to gain a competitive advantage or who needs the certifications because of legal reasons or company internal regulations.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• Be familiar with the basic operation of an infrared camera</li> <li>• Have the recommended experience within thermography according to relevant standards</li> </ul>

Course details	
Duration	35 – 40 hours
Structure	Theory and camera practice (hands-on) alternate every day, additional labs and software exercises at some days.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>• Tuition by ITC licensed instructor</li> <li>• Training material in printed format</li> <li>• Refreshments</li> <li>• Diploma of attendance</li> <li>• Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>• Attendance of a group up to 10 persons</li> <li>• Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity</li> </ul>

Course organization	
ITC	The Level 1 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in "Courses offered by ITC partners" (T560393). Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

This partnumber is reserved for adding additional students to a level 2 on site class.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>

Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Note	Only for non-EURO, non-SEK, non NOK, non- £, -non CHF countries

Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

Available languages	Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish
Target group	<ul style="list-style-type: none"> <li>• Professional user</li> <li>• This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.</li> </ul>

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of 1 person</li> <li>Might include more, such as lunch, depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course prepares the student for qualification as a category 2 certified thermographer. The participant will learn about topics in infrared thermography to increase the knowledge about infrared physics, heat science, infrared measurement equipment and its application. As a Level 2 thermographer the participant shall provide guidance to category 1 personnel in the areas of equipment selection, techniques, limitations, data analysis, corrective actions and reporting.

#### Content

- Thermal science
- Heat transfer
- Temperature measurement
- Infrared science
- IR equipment and applications

#### Student presentations

During the seminar, students shall present a prepared case study to the class. The maximum duration (excl. discussion) should be 7 minutes and the maximum number of 7 slides should not be exceeded.

#### Labs (Note: Labs marked "(M)" are mandatory)

- Newton's law (class lab) (M)
- Advanced emissivity measurement (M)
- Variation of emissivity with the angle (M)
- Transient thermal transfer
- Indirect power measurement (M)
- IR-window transmission (M)
- Slit Response Function
- Hole Response Function (M)
- Parallel circuits

### Course information

#### Available languages

Dutch, English, German, French, Italian, Portuguese (bra.), Spanish, Swedish

#### Target group

- Professional user
- This course is designed for thermographers holding a Level 1 certificate, who want to increase their knowledge about IR thermography and who want to qualify as a Level 2 certified thermographer.

Course information	
Typical student	<ul style="list-style-type: none"> <li>A person with a professional technical background such as technician, engineer, consultant, or researcher who works with maintenance, building inspection, mechanical or electrical applications, production, or R&amp;D,</li> <li>having several months of professional experience within thermography,</li> <li>versed in camera operation and reporting,</li> <li>holding a Level 1 certificate,</li> <li>who needs the Level 2 Certification for guidance and supervision of other thermographers or is interested in deeper understanding of IR thermography.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Valid Level 1 thermography certificate,</li> <li>Recommended experience within thermography according to relevant standards,</li> <li>Prepared case study to be presented at the Level 2 course and submitted towards qualification at course closing.</li> </ul>
Course details	
Duration	40 hours
Structure	Theory, camera practice (hands-on), and prepared case studies alternate every day.
Exam	Written exam (closed book) including multiple choice questions and practical image interpretation on the last day. Maximum duration as defined by relevant certification standards.
Course fee includes	<ul style="list-style-type: none"> <li>Tuition by ITC licensed instructor</li> <li>Training material in printed format</li> <li>Refreshments</li> <li>Diploma of attendance</li> <li>Certificate of conformance with certification requirements (subject to passing the exam)</li> <li>Attendance of a group up to 10 persons</li> <li>Might include more, such as lunch, instructor's travel expenses, etc. depending on location and organizing entity.</li> </ul>
Course organization	
ITC	The Level 2 Thermography Course is offered worldwide by ITC subsidiaries and ITC partners as listed in T560393 Courses offered by ITC partners. Specific customer requests shall be forwarded to the closest ITC subsidiary or LTC as listed in "ITC Directory" (1560096).
ITC Trainers and Licensed Trainers	"Courses taught by ITC instructors" (T560392) lists all licensed trainers and ITC trainers authorized to teach Level 1 Thermography Courses.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of photovoltaic solar systems.

During the first day, you learn about the basics of thermography, how a thermal camera works, and how to use it correctly. The second day starts with the basics of photovoltaic solar systems and solar panel installations. You learn about IR metrological particularities that are critical for solar panel inspections with a thermal camera, how to interpret the displayed thermal images, and in which way they can be associated to typical problems and faults. Emphasis is put on case studies, selected from the field, as well as practical exercises.

### Content

- Basics of thermography (radiation, spectral waveband, influences of the atmosphere)
- IR camera: principle, design and operation (FPA, measurement ranges, thermal tuning: level and span, color palettes)
- IR measurement technique: measurement parameters (emissivity, radiation from the environment, distance, relative humidity, atmospheric temperature)
- IR Camera figures of merit: resolution limits (thermal, spatial, time related)
- Practical exercises
- Basics of photovoltaic solar systems (terminology, design, principle of operation, module types)
- Solar panel installation: connection types (string, bypass diodes, shadowing)
- IR metrological particularity (spectral bands, inspection conditions, spatial resolution, camera positioning and angle)
- Typical thermal readouts (examples, causes and interpretation – defect/no defect, practical exercises)

### Course information

Available languages	English, French, German, Swedish, Italian, Dutch, Spanish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in the use of IR thermography for the inspection of photovoltaic solar systems.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person working with maintenance or installation of solar panels.</li> <li>• Thermographers familiar with electrical inspections and interested in solar panel inspections.</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Basic knowledge in electrical installations or another technical field.</li> </ul>

### Course details

Duration	2 days
Structure	Theory, camera handling, demos and practical labs alternate.

### General description

This course gives a general introduction to IR thermography and an overview on its specific use for inspections of electrical systems. It aims at giving you clues on what you can do with your camera.

During the first day, you learn the basics of thermography and how to use your camera the best way. The second day you will start with a brief reminder of thermal transfers before you learn about electrical systems and components, material properties, typical problems and faults. Emphasis is put on case studies, selected from the field.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- IR Camera handling
- Basics of heat transfer
- Electrical systems
- Important properties of material
- Most common problems
- Case studies
- Common mistakes
- Application guidelines
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement
- Electrical application labs

### Course information

Available languages	English, French, German, Swedish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and electrical applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• A person working with maintenance or installation of electrical systems</li> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• Students and pupils with thermography and electrical application related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

### General description

This is a full one day course for beginners and everybody interested in IR thermography and its applications. The course covers the basics of IR theory and includes demos, camera hand-on and practical exercises using relevant key labs.

#### Content

- Basics of thermography
- Basics of emissivity and reflected apparent temperature
- Introduction to electrical and building inspections
- IR Camera handling
- Data analysis and reports

#### Labs

- Emissivity and Trefl
- Influence of the angle on the measurement
- Influence of the object size on the measurement

### Course information

Available languages	English, French, German, Swedish, Danish
Target group	<ul style="list-style-type: none"> <li>• Beginners and everybody interested in IR thermography and its applications.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>• Someone looking to purchase a camera</li> <li>• Someone who just purchased a camera</li> <li>• A person who starts to use IR cameras at work</li> <li>• Students and pupils with thermography related projects</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>• None</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>• Interest for the technology and its applications</li> </ul>

### Course details

Duration	1 day
Structure	Theory, camera handling and demos in the morning. Practical labs in the afternoon.

General description	
These courses are for users of FLIR software like FLIR Reporter Professional or FLIR ResearchIR. Please observe that content and labs depend on the software used.	
Content	
<ul style="list-style-type: none"> <li>System requirements</li> <li>Configuration</li> <li>Analyzing functions</li> <li>Templates</li> <li>Reporting functions</li> <li>Data exchange</li> </ul>	
Labs	
<ul style="list-style-type: none"> <li>System set up</li> <li>Data import</li> <li>Data analysis</li> <li>Creating templates</li> <li>Creating reports</li> <li>Exporting data</li> <li>Triggering</li> </ul>	
Course information	
Available languages	English, French, German, other languages upon request
Target group	<ul style="list-style-type: none"> <li>Persons interested in, or users, of the specific software.</li> </ul>
Typical student	<ul style="list-style-type: none"> <li>Consultants interested in reporting</li> <li>Building inspectors with reporting needs</li> <li>R&amp;D staff interested in advanced data analysis</li> </ul>
Pre-requisites	<ul style="list-style-type: none"> <li>Laptop with installed software full version or 30 day demo (download on <a href="http://www.flir.com">www.flir.com</a>)</li> </ul>
Recommendations	<ul style="list-style-type: none"> <li>Basic knowledge about thermography and related parameters.</li> </ul>
Course details	
Duration	Depends on software.
Structure	Short system introduction, then demos and practical exercises.

General description	
This device is a viewport which consist of a crystal "glass" window, mounted in an aluminum frame. The glass is specially formulated to allow transmission of infrared light to allow use of infrared thermal sensing equipment without opening the enclosure. This device is intended for installation in doors or walls of electrical enclosures without compromising the integrity of the enclosure.	
Power system	
Voltage	Any range
Environmental data	
Environment	Indoor/outdoor type 4/12
Operating temperature range	Maximum: 260°C (500°F)
Storage temperature range	Optics, maximum: 1357°C (2474°F)
Physical data	
Size (L x W x H)	25.5 x 73 x 86 mm (1.0 x 2.87 x 3.36 in.)
Viewing aperture diameter	45 mm (1.77 in.)
Material	Optics: CaF <sub>2</sub> (Calcium Fluoride Crystal) Body: Anodized aluminum Hardware: steel
Comments to physical data	Required hole diameter, nominal: 60.3 mm (2.375 in.) Greenlee Punch: 76BB Maximum pullout strength: 658 kg (1450 lb.)
Lens	
Waveband	Broadband IR: short-, mid-, and longwave
Visible light spectrum	Yes
Certifications	
Certification	UL, IP67, NEMA Type 4/12, CSA
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>IR window</li> <li>Case</li> <li>Mounting instruction</li> <li>Additional safety screw</li> </ul>
Packaging, weight	0.24 kg (0.53 lb.)
Packaging, size	120 x 115 x 40 mm (4.7 x 4.5 x 1.6 in.)
EAN-13	4743254000728
UPC-12	845188002817
Country of origin	Estonia

Voltage	Any range
Environmental data	
Environment	Indoor/outdoor type 4/12
Operating temperature range	Maximum: 260°C (500°F)
Storage temperature range	Optics, maximum: 1357°C (2474°F)
Physical data	
Size (L x W x H)	29.3 x 127 x 137 mm (1.15 x 5.01 x 5.37 in.)
Viewing aperture diameter	89 mm (3.50 in.)
Material	Optics: CaF2 (Calcium Fluoride Crystal) Body: Anodized aluminum Hardware: steel
Comments to physical data	Required hole diameter, nominal: 114.3 mm (4.5 in.) Greenlee Punch: 742BB Maximum pullout strength: 1678 kg (3700 lb.)
Lens	
Waveband	Broadband IR: short-, mid-, and longwave
Visible light spectrum	Yes
Certifications	
Certification	UL, IP67, NEMA Type 4/12, CSA
Shipping information	
Packaging, type	Cardboard box
List of contents	<ul style="list-style-type: none"> <li>IR window</li> <li>Case</li> <li>Mounting instruction</li> <li>Additional safety screw</li> </ul>
Packaging, weight	0.46 kg (1.01 lb.)
Packaging, size	165 x 175 x 40 mm (6.50 x 6.89 x 1.58 in.)
EAN-13	4743254000742
UPC-12	845188002831
Country of origin	Estonia
